Site n°1: Compression Molding – Injection Molding – Water Jet Cutting – Finition – Quality Control – Logistics

Site N°2: Administrative Area – Research & Development – Machining – Tooling

Since 1981, FRANCE JOINT – SEALING SYSTEMS has been designing, manufacturing and distributing seals and precision rubber parts for its customers for whom quality is a determining factor.

Faced with tough competition among the big decision-makers of the industrial world, FRANCE JOINT has responded with innovation, research and development, experience in Best-Cost manufacturing, and a consistently high level of quality, thanks to certificates ISO 9001, IATF 16949, EN/AS 9100 and ISO 14001.

Today, FRANCE JOINT is working in close collaboration with its customers, meeting challenges head on with success. Automotive, Aeronautics, Mobile hydraulics, Beverages & Foods, Fluid engineering industries... every solution emerges from a uniquely individual partnership, constantly fostered and renewed.

Our prime objective, based on unrivalled quality, is to find the most suitable solutions for ensuring that

you will stand out in what has become an extremely competitive domain. Our position of excellence has led us since the birth of our company to acquire the tools necessary to anticipate and prevent risks and maximize our service; the ultimate objective being of course to help you keep ahead of developments in this more and more technological market.

RESEARCH & DEVELOPMENT

Innovation, reliability, safety, minimization of risk: your expectations are our daily concern.
To get from the idea to the finished product demands firm managerial control over a wide range of projects in addition to expertise in manufacturing.

FRANCE JOINT's contributors, who are as much inventors as technicians, get the best of fully automated, state-of-the-art technology that takes them from drawing-board to prototype and finally to assembly line. From writing specifications to putting on a major technical event through designing (3D Solidwrks software) and testing for validation and compliance, FRANCE JOINT engineering works hand in hand with you to find the best solutions guaranteeing the level of expected performance.

More than 1000 compounds integrating elastomers, PTFE materials, Polyurethane, or even thermoplastics, as many solutions vis-a-vis the new most complex requirements which will put you in pole position today so that we can all be winners tomorrow. FRANCE JOINT puts in place qualifications in order to examine the behavior of its seals according to various parameters intervening on frictions, pressures, temperatures, speeds, strokes, leakages...

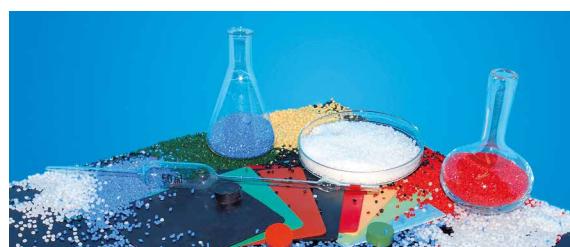

QUALITY IN OUR CONCERN

Several certificates obtained, ISO 9001, IATF 16949, EN/AS 9100 and ISO 14001, testify to the quality department's commitment to constant progress at every level of the company, at all stages of the realization, particularly where continual improvement is what has made FRANCE JOINT the name it is today.

Ambitious with customer satisfaction a priority, FRANCE JOINT has thus obtained the most powerful methods (PPAP, AMDEC, value analysis, Audits, MRP, 8D analysis, SPC, R&R ...) in order to optimize simultaneously the capacity of machines and processes, operational manpower performances, organizational methods, and finally, product and financial results.

FRANCE JOINT guarantees the best technology and pursues its daily objectives of a "Zero defects" production, through physico chemical controls (rheometer, spectrometer, durometer...), through dimensional and final aspects (unit controlling equipment, 3D camera ...). This is because the search for competitiveness is as important as the search for continuous improvement.

○ HYDRAULIC SEALS

1. Introduction

There are a number of sealing systems designed for all types of machines, ranging from the simplest to the most complex and depending on field of application. Correctly defining the functional parameters is an essential step in the choice of sealing system and the materials that should be prioritised; each profile and material is designed to meet the specific and varied stresses of different hydraulic systems, including hydraulic cylinders. Working closely with its customers, FRANCE JOINT actively participates in development projects, using its expertise and recommendations to select sealing components.

As critical elements in the correct operation of hydraulic machinery, sealing systems must meet increasingly specialist technical requirements:

- **wear resistance**
- **compatibility with media**
- **resistance to the effects of temperatures**
- **resistance to pressure**
- **resistance to speed**
- **reduced friction loads**

In certain fields of application, typically in heavy-duty mobile machinery where requirements are very important, a single seal is not compatible with all types of stress; that's why FRANCE JOINT offers a wide range of sealing systems. All of these sealing systems are designed for heavy-duty rod applications, and are configured as follows: a buffer seal, secondary seal, wiper seal and guiding components; for the piston part: a piston seal and guiding components.

Hydraulic seals must contain the fluids and maintain the hydraulic pressure (piston seals, rod seals, static seals), to stop the inlet of impurities and to maintain the lubricating film on the rod (wiper seals), and to resist any deformation under a radial load by guiding the piston and rod (wear rings and guide strips).

2. Environment

2.1 FRICTION/LUBRICANT RELATIONSHIP

When hydraulic machinery is in operation, there are different phases of friction until a lubricating film is formed. The thickness of the lubricant film, which is located between the seal and the contact sliding face, greatly influences the nature of the friction. There are different phases of friction as the hydraulic system reaches its operating speed.

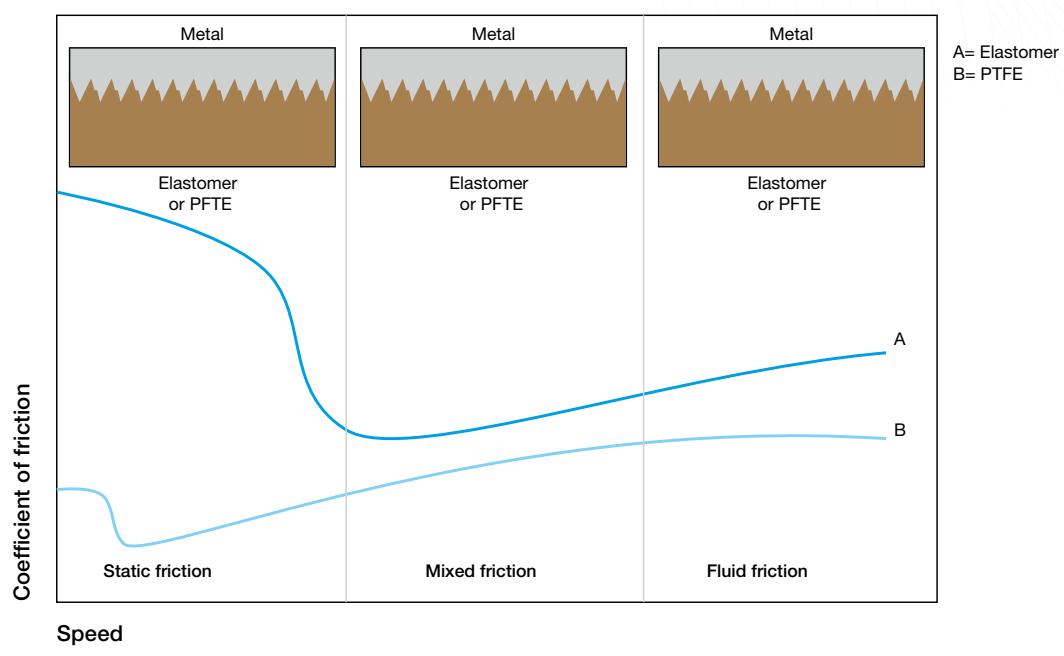

The first is a dry friction between the seal and the contact mechanical part, which has a significant force called adhesive friction, and which takes shape during system start-up.

As the system accelerates, a lubricating film forms little by little between the seal and the contact mechanical part, which considerably reduces friction. This is a mixed friction located between the seal and the lubricated mechanical part.

Finally, as the speed continues to increase, so does the force of the friction, transforming it into a viscous friction between two bodies with a hydrodynamic lubrication.

These different phases remain similar for all types of operation, but at different levels for each material used.

The diagram below indicates that PTFE is recommended for lower pressures and speeds, as it reaches the viscous friction phase more quickly.

2.2 TEMPERATURE

The temperature of the hydraulic fluid as well as the surrounding temperature plays a determining role in the choice of material. The ideal temperature for optimal seal operation is between +30°C and +60°C. However, the choice of material must also be determined, taking into account the heat created at the point of contact on the sealing lip under friction. When using hydraulic cylinders, the temperature usually reached is +80°C and, in extreme cases, +110°C.

When the temperature increases, the seal's material becomes more elastic and its resistance to deformation is reduced. That's why we have developed seal profiles in which the sealing lips are pre-stressed by the inclusion of a metal spring or O'Ring. For temperatures that exceed +100°C, FRANCE JOINT offers special materials, including HNBR – FKM – high-temperature PU – PTFE, among others.

On the other hand, when the temperature is reduced to negative values, the seal's material has a tendency to harden and become less elastic. However, the seal's operational safety is not really influenced by the increase in fluid viscosity. For temperatures that could go lower than -40°C, FRANCE JOINT offers special materials, including NBR – FKM – HNBR – PU – PTFE.

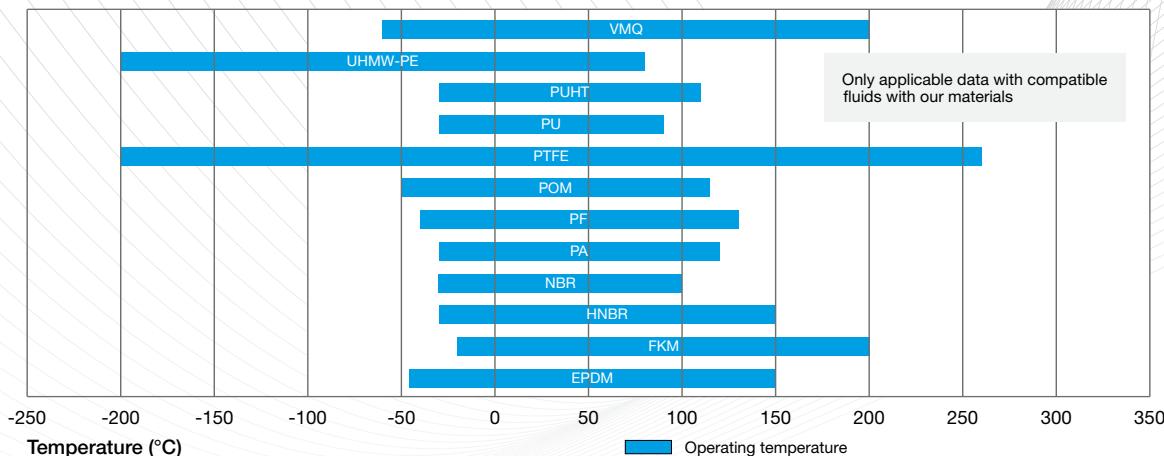

Table 2.2-1

2.3 OPERATING AND DRAG PRESSURE

Pressure is a determining factor to be taken into account when choosing the seal and material hardness. Along with the cylinder size, the pressure of the hydraulic system determines the thrust. From one application to another, we consider the pressure exerted to be defined as:

- **Machine tools:** 8 – 16 MPa
- **Material handling - Lifting:** 16 – 25 MPa
- **Hydraulic presses:** 16 – 28 MPa
- **Construction – Mining – Heavy industry:** 28 – 40 MPa

In certain applications, fluctuations in very high point pressures can appear – mechanical impacts, water hammer – particularly in mobile machinery. FRANCE JOINT offers strong seals designed to efficiently cope with such stresses.

Moreover, when gaps are very tight at the guide in a fitting such as a hydraulic cylinder, hydrodynamic pressures, also called drag pressures, may be generated. With a much smaller gap between the guide and the rod, and a constant flow rate, additional pressures (which can reach up to several dozen MPa) can appear in front of the seal, causing it to deteriorate.

**THIS PRESSURE INCREASE
IS EXPRESSED BY THE FOLLOWING FORMULA:**

$$\Delta P = p_1 - p = \frac{6 \times \eta \times v \times L}{Hs^2}$$

P: pressure
η: dynamic viscosity of the fluid
v: speed
L: length of the guide
Hs: radial extrusion gap

There are ways to prevent the formation of such drag pressures. Helicoidal grooves are provided with a section that is larger than that of the seal; this is in order to prevent the premature destruction of the seal and certain mechanical parts. For BECA 005 – 006 – 007 wear rings, an opening has already been created, preventing the creation of return ducts.

2.4 SPEED

The choice of material is also determined by the system's operation speed. The rubbers and polyurethanes in friction against the moving surface can withstand speeds between 0.1 m/s and 0.5 m/s. For PTFE materials, speeds up to 5 m/s, or even greater, are permitted. For particularly low stresses, the speed can be limited to up to 0.05 m/s, increasing the friction and limiting the formation of lubricating film.

In such conditions, "stick-slip effects" may appear, which are defined as jerking movements caused by a succession of slipping phases followed by sticking phases.

To guard against such effects, FRANCE JOINT has developed a suitable range of seals, where the parts subject to friction are made from PTFE with optimised geometries. Other special materials are also available, such as PE-UHMW.

2.5 HYDRAULIC FLUIDS

a. Introduction to oils

Fluid holds a prominent place in the hydraulics field. It encourages:

- the transmission of power to different working components (transmission of energy as pressure)
- the lubrication of mechanical parts to limit the amount of wear on moving parts
- the protection of the entire hydraulic system
- the removal of heat

The hydraulic fluid most commonly used is mineral oil. Water is the ideal hydraulic fluid (low compressibility, non-flammable, negligible cost) if it does not present serious drawbacks (corrosion, lubrication fault, etc.) to the operation of machinery. A significant number of fluids are used to meet specific requirements. There are:

- mineral oils
- fire-resistant oils
- biodegradable oils

b. Oil classification

Mineral oils

ISO Classification	Properties	Applications
HH	Additive-free mineral oil	This oil only ensures energy transmission and is rarely used today
HL	Oil + additives with antioxidant and anti-corrosion properties to combat ageing	This oil is used for low-stress environments and works very well with water
HM	It has the same features as HL coupled with anti-wear properties to encourage resistance to wear and loads	This oil is heavily used for significant pressures
HLPD	It has the same features as HM coupled with detergent additives	This oil is heavily used for significant pressures with water intake
HR	It has the same features as HL coupled with an improved tolerance to viscosity/temperature	This oil is used during major temperature fluctuations
HV	It has the same features as HM coupled with an improved tolerance to viscosity/temperature	This oil is used during major temperature fluctuations and at low temperatures
HS	Synthetic oil without special fire resistance properties	Special properties
HG	It has the same features as HM coupled with additives to improve its anti-stick-slip properties	This oil is used for machines where lubrication is common to hydraulic parts, rails and joints
HD	Oil + additives for antioxidant, anti-wear and detergent properties	This oil is heavily used in mobile hydraulic systems and in engines

Fire-resistant oils

Group	Temperature	Properties	Applications
Aqueous fluids			
HFAE	+5°C to +60°C	Oil-in-water emulsion with more than 80% water (generally 95 - 98%)	These oils are used in hydraulic presses and in systems where leaks are significant
HFAS		Synthetic oils in aqueous solution with more than 80% water (generally 95 - 98%)	
HFB		Oil-in-water emulsion with more than 40% water	
HFC	-30°C to +60°C	Polymer solution (polyethylene glycol or polypropylene glycol) with more than 35% water (less than 80% water)	This oil is used in industrial environments with a maximum temperature of +60°C and average stresses

Group	Temperature	Properties	Applications
Non-aqueous fluids			
HFDR	-30°C to +150°C	Phosphoric ester base, free from water	This oil is used for significant stresses and for very high temperatures
HFDU		Synthetic fluid with specific composition	
HFDS		Chlorinated hydrocarbon base, free from water	
HFDT		HFDR and HFDS mixture	

Biodegradable oils

ISO Classification	Properties	Applications
HETG	Vegetable oil	This oil is used in the agriculture and forestry sectors
HEPG	Polyglycol	This oil is used in water protection areas
HEEG	Synthetic ester	This oil is mainly used in construction machinery

c. Impurities and air in oil

A fluid's cleanliness is an important factor in optimising the operation of a hydraulic system. Limited hydraulic filtration will lead to a disruption in the mechanism, which is caused by impurities. These impurities have multiple guises, such as metal shavings and other abrasive particles, silica, external dusts, oxidised products (rust), etc. and can lead to premature seal deterioration. It is therefore essential to perform regular checks and reconditioning on filtration systems.

Moreover, the air in the oil can lead to a breakdown of the seal through a phenomenon known as micro explosions. Hydraulic fluids actually contain air particles dissolved in the oil, which will compress and connect as the pressure increases and will tend to relax and escape when the pressure lessens. These particles are always positioned between the seal and the spaces in the groove and closest to the gaps formed by them.

This simultaneous compression and relaxation of air particles in the oil will heat up their epicentre, suddenly increasing the temperature and provoking self-ignition, also known as the "diesel effect".

If this occurs regularly enough, it can lead to the destruction of the back of the seal and even the destruction of mechanical parts and guides as they are blasted and burned. To prevent such risks, it is imperative to bleed the hydraulic systems to limit these micro explosions.

2.6 VISCOSITY

The viscosity determines a hydraulic fluid's capacity to flow. It is, essentially, the resistance that the fluid's molecules encounter, and they move by sliding between each other. The term used today is "fluidity".

Factors that will influence viscosity are essentially temperature and pressure. ISO standard 3448 classes all industrial oils according to their viscosity, expressed in mm²/s at a reference temperature of +40°C.

As the temperature increases, the viscosity has a tendency to decrease. On the other hand, the viscosity can increase when the temperature decreases. A continually increasing pressure can also lead to a continually increased viscosity. Generally speaking, we consider that at a consistent temperature, the viscosity follows a very marginally exponential curve, depending on the pressure.

IT CAN BE EXPRESSED USING THE FOLLOWING FORMULA:

$$\Delta V = 0.003 \times p \times VO$$

p: pressure in MPa

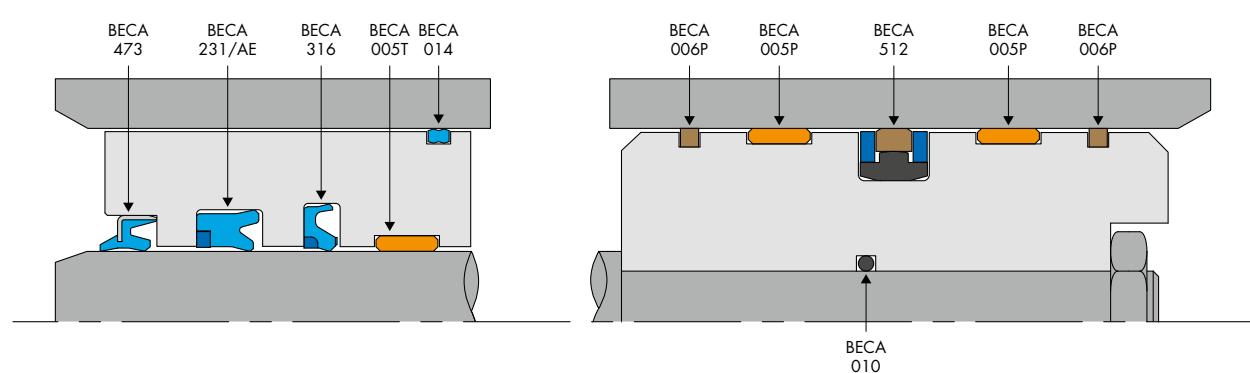

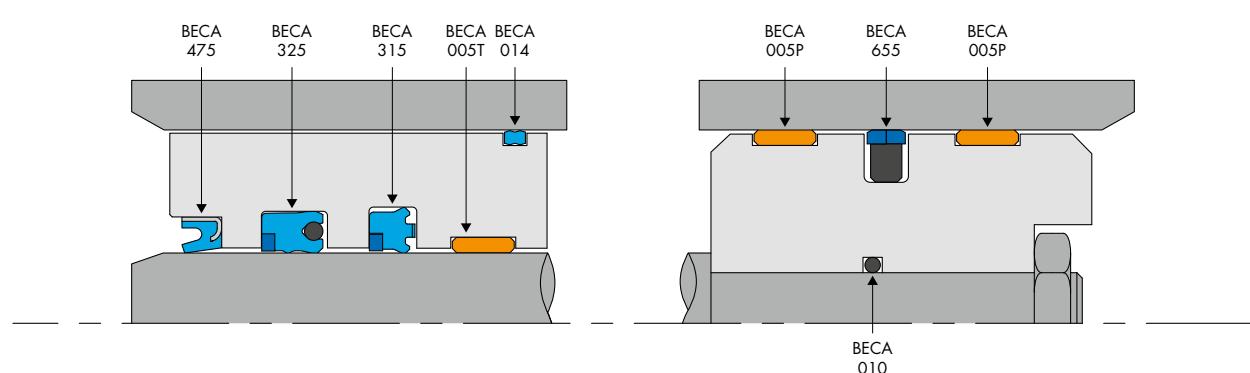

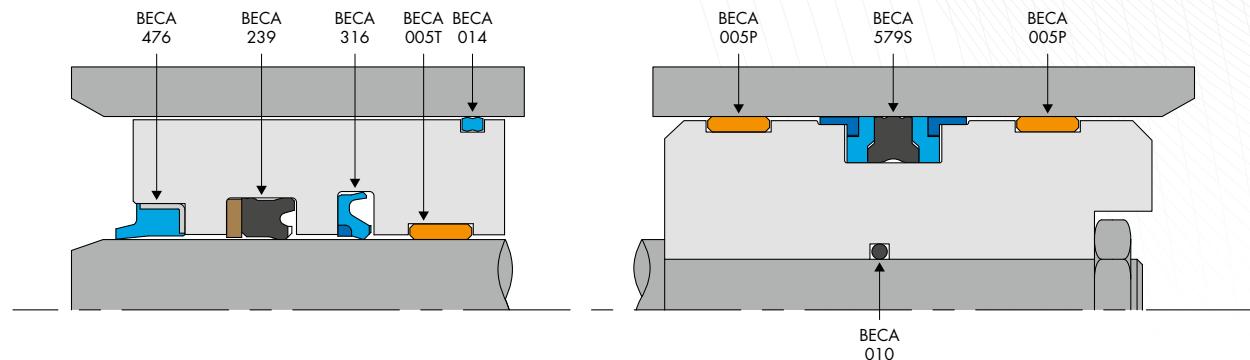

VO: viscosity at atmospheric pressure

The Viscosity Index (VI) measures the viscosity fluctuation with the temperature. Oils with high viscosity indexes are less dependent on temperature.

3. Examples of applications

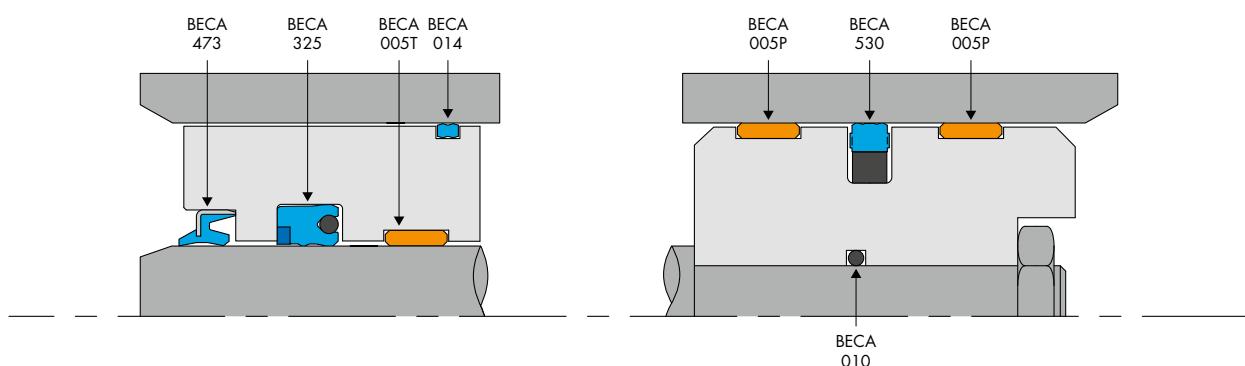

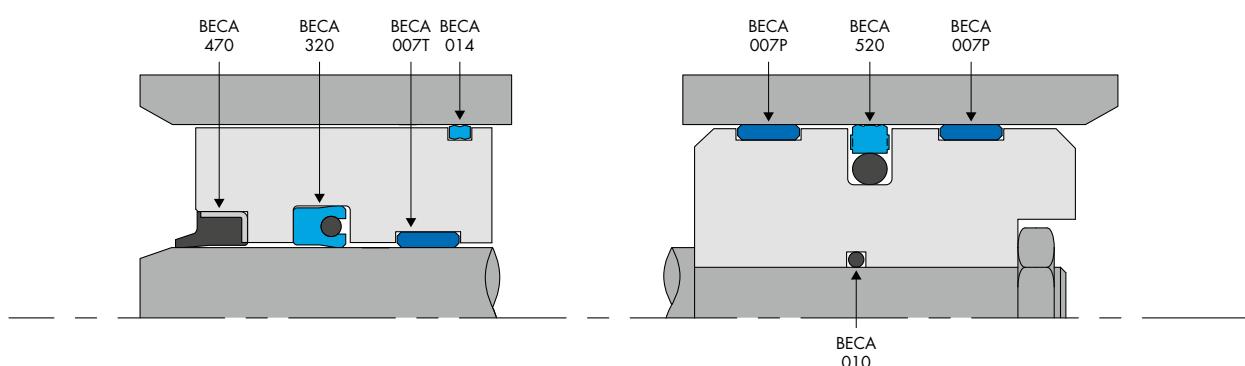

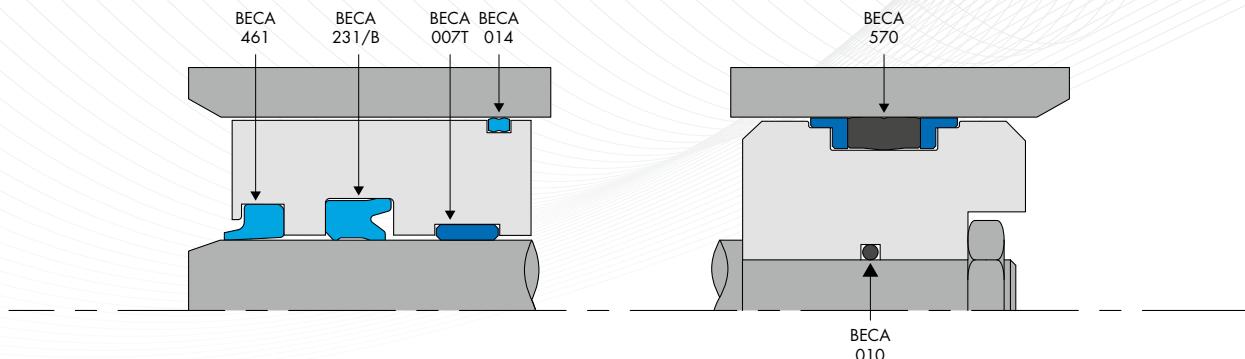

CONSTRUCTION

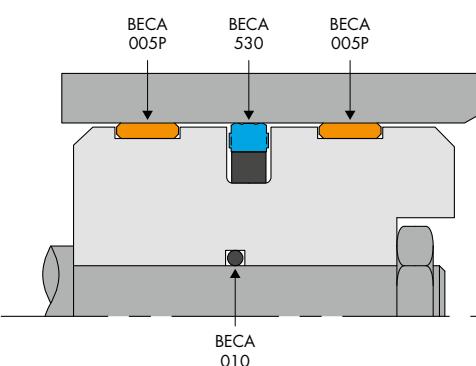

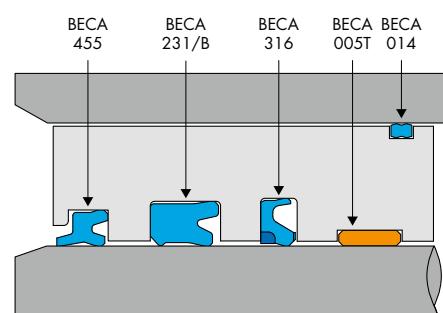

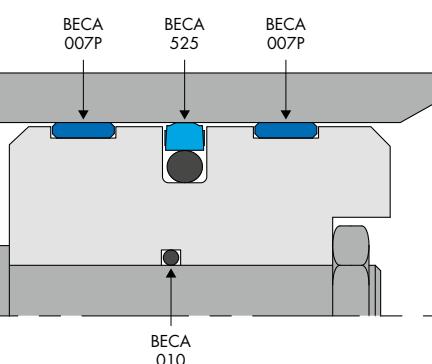

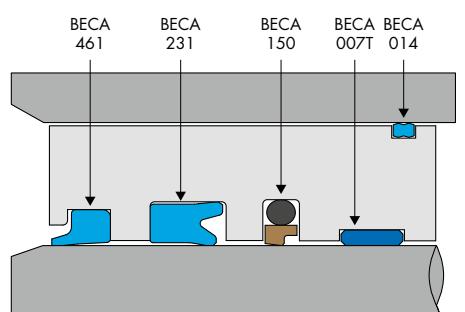

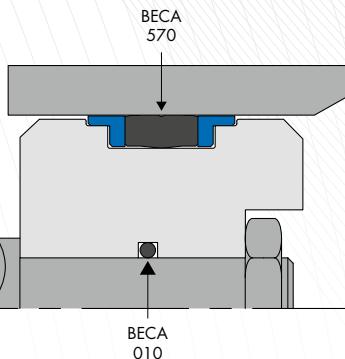

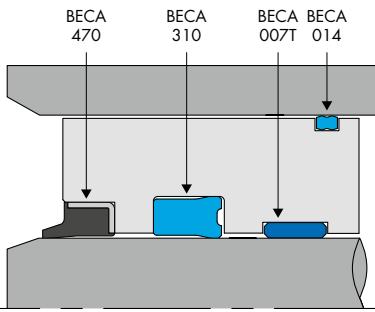

AGRICULTURE

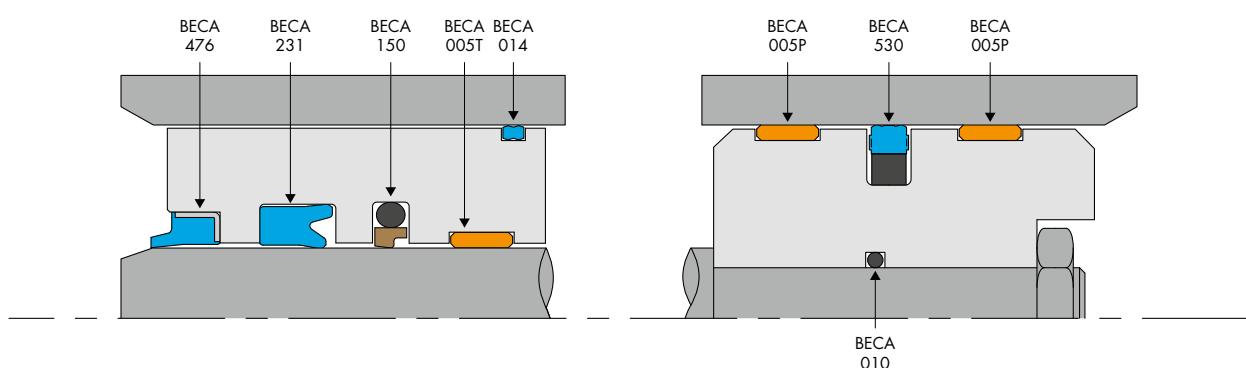

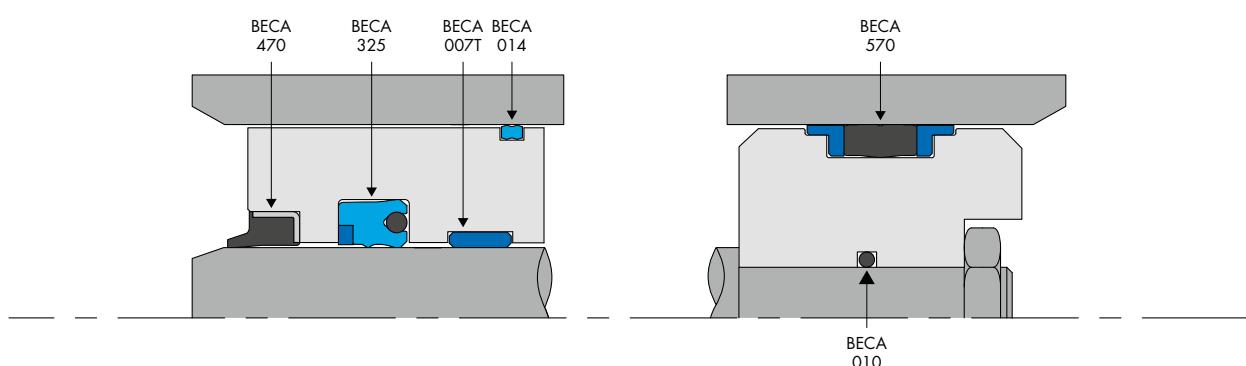

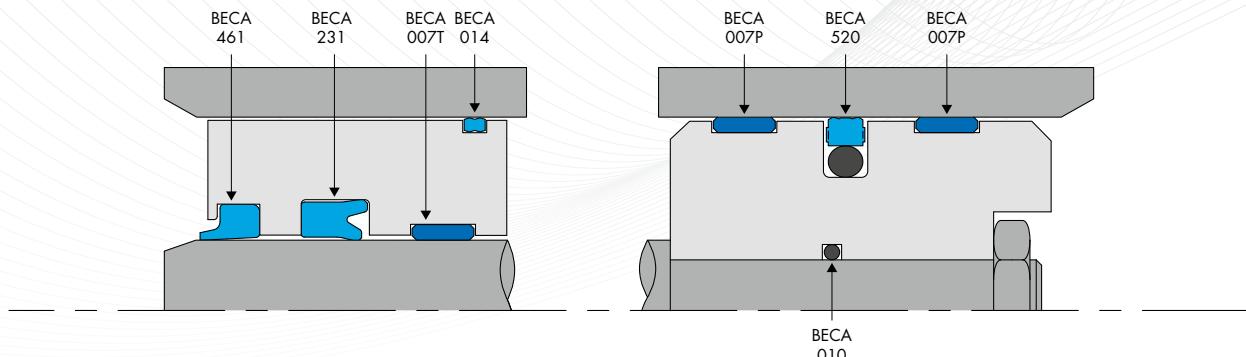

MATERIAL HANDLING

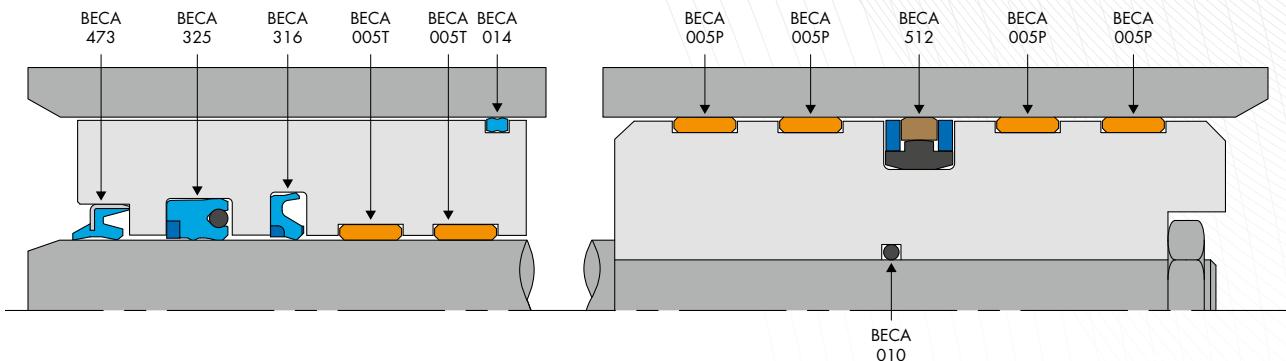

LIFTING

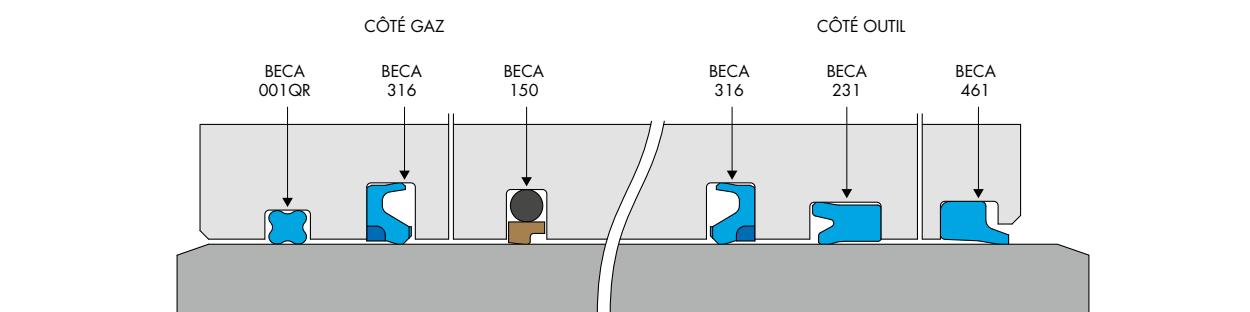

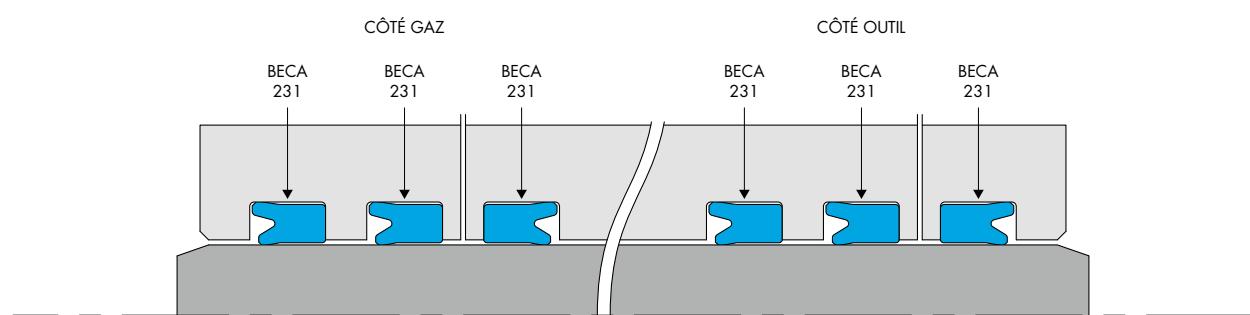

MINING

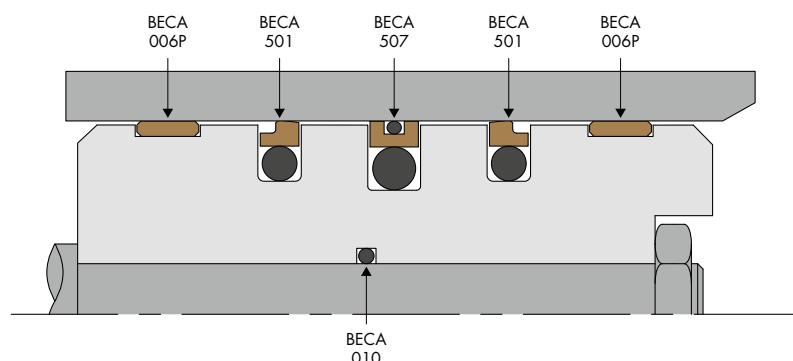

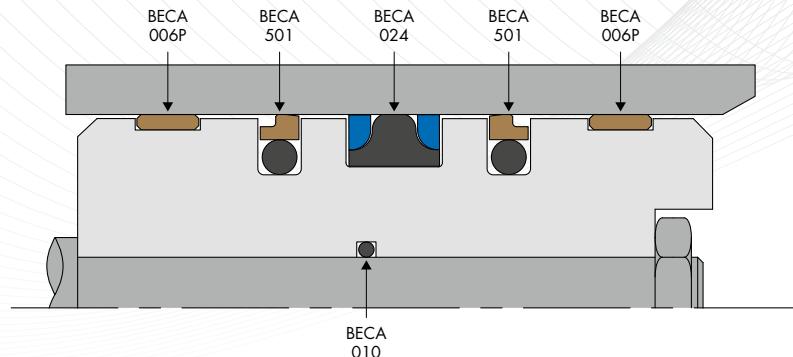

HYDRAULIC BREAKER

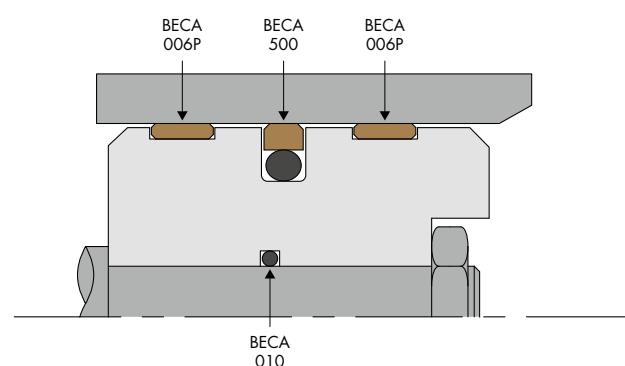

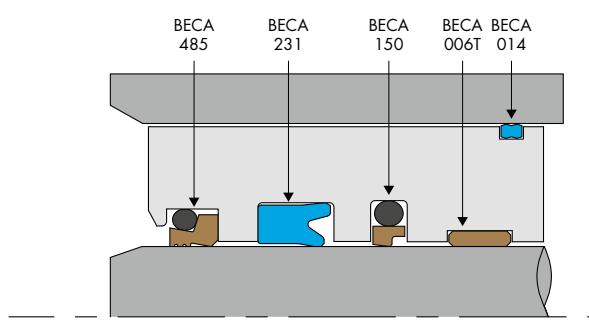

PISTON ACCUMULATORS

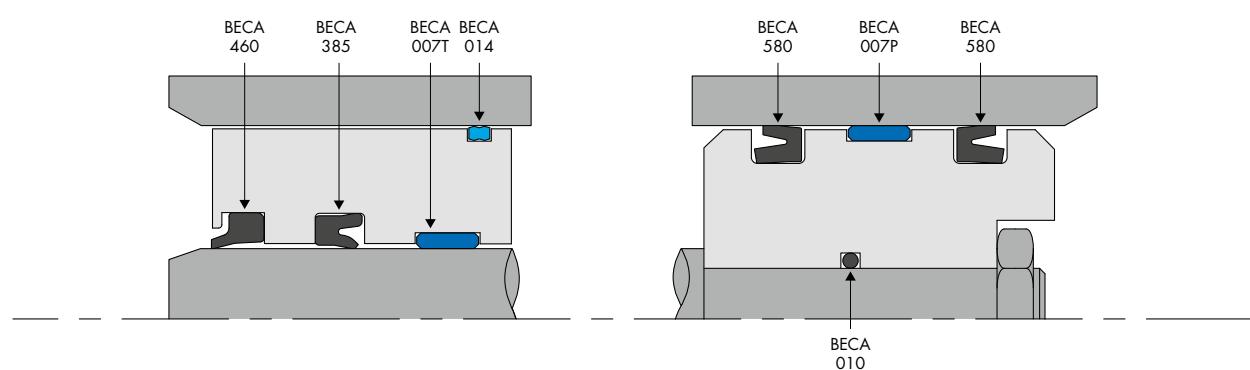

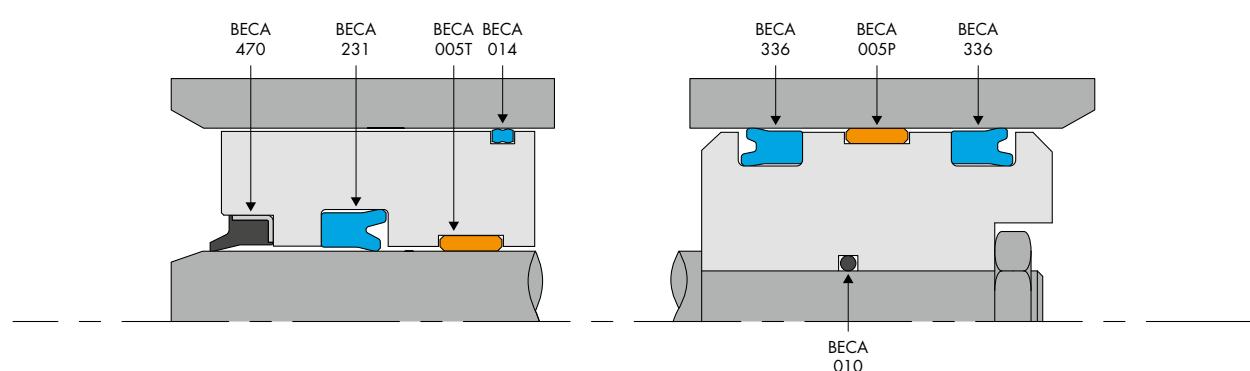

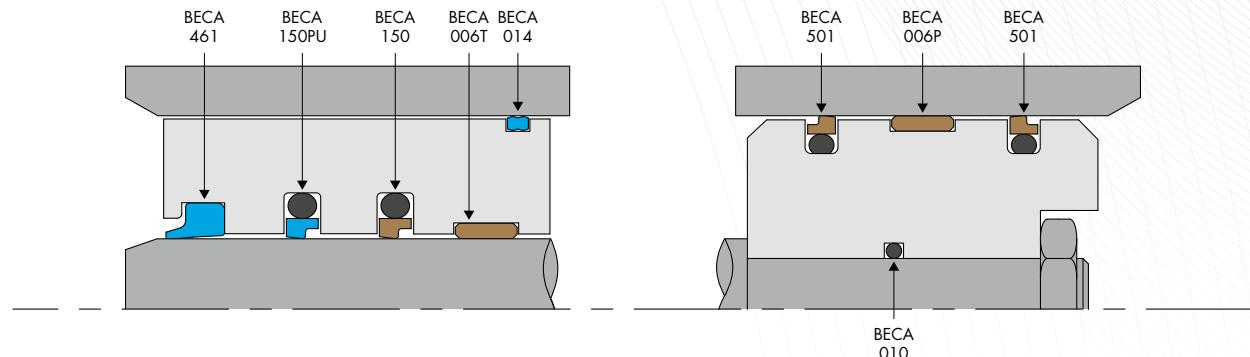

INDUSTRIAL APPLICATIONS

INDUSTRIAL APPLICATIONS (CONT.)

4. Assembly recommendations

Several essential rules must be followed before fitting the seals.

- Check that the mechanical parts (rods and bore parts) have an inlet chamfer. If not, a suitable sleeve must be used.
- Flash and chamfer or round off the sharp edges; cover the threaded parts.
- Remove the machining shavings and all impurities and other foreign bodies. Clean all mechanical parts carefully.
- Grease or oil the seal and mechanical parts to facilitate assembly. To do this, ensure beforehand that the lubricants are compatible with the seal materials. Avoid greases containing solid additives (molybdenum disulphide or zinc sulphide).
- If using installation tools, check that they are clean and do not have sharp edges.
- Soak the seal in oil heated to around +80°C / +100°C (in the water heated for the EPDM) to give the material a greater elasticity. Effective for textile fibre seals and for harder seals.
- Create assembly tools (mandrels, correction tubes, push-in tools, slide tools, plugs, etc.) using a polymer (Polyamide - PA6 or Polyoxymethylene - POM), taking into account characteristics such as sliding, and generally having excellent surface roughness so that the friction ring does not deteriorate.

Fitting methods differ depending on the type of groove (open or closed) as well as the seal's profile. The table below sets out all of the methods used to correctly fit seals from our range.

Type of seal	Rod seal	
	Closed groove	Open groove
Composite seal	Assembly 1.A	
Lip seal	Assembly 1.B	Assembly 1.C
Compo-compact seal	Assembly 1.B	

4.1 ASSEMBLY 1.A - ROD COMPOSITE SEAL - CLOSED GROOVE

Applicable for the following product families: BECA 150-152-154, BECA 151-153-155, BECA 157-158, BECA 161-163-165, BECA 170-179, BECA 640.

Using assembly tools:

- Insert the O'Ring into the groove.
- Prepare a push-in rod and a plug adapted to your application's dimensions.
- Clip one side of the friction ring into the groove and push it into place using the push-in tool (see diagram 4.1-1 opposite).
- Prevent any of the sealing components from twisting.

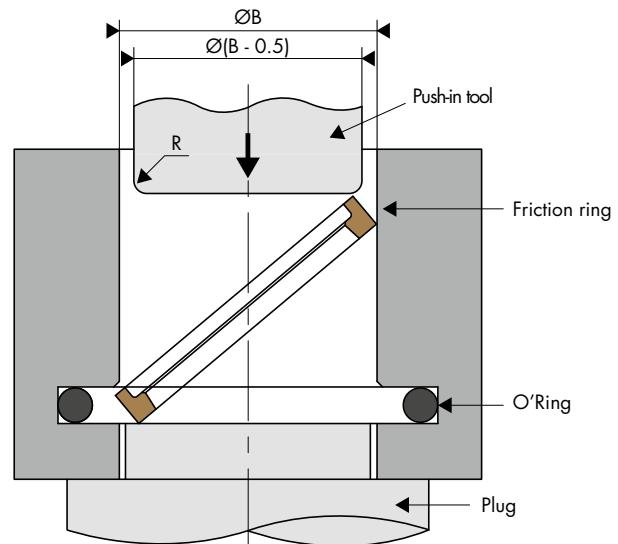

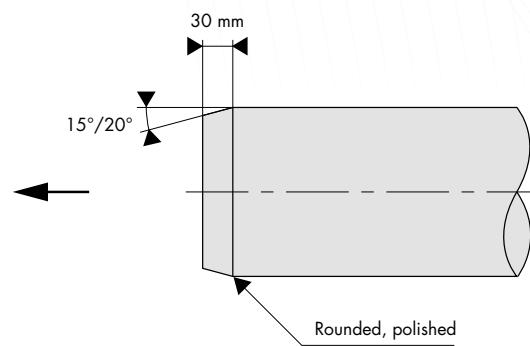

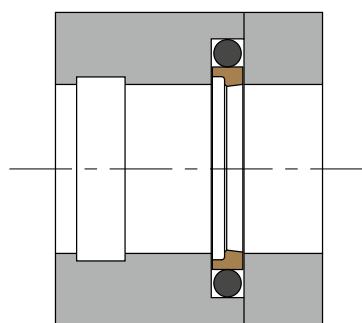

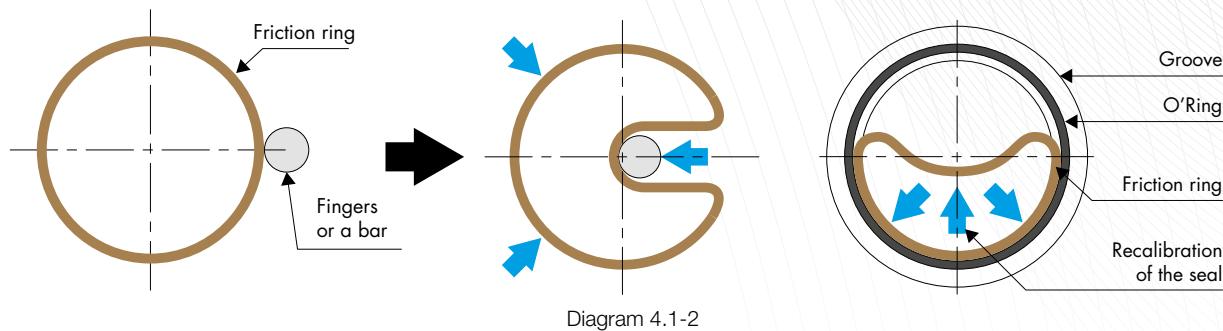

Diagram 4.1-1

If assembly tools fail:

- Fit the O'Ring into the groove.
- Distort the friction ring by shaping it like a bean without creating a sharp angle (see diagram 4.1-2).
- Position the friction ring in the groove and restore its shape by pushing it against the O'Ring.
- Calibrate the friction ring using a mandrel chamfered between 15° and 20° along a length of 30.00 mm.

4.2 ASSEMBLY 1.B - LIP SEAL, ROD COMPO-COMPACT SEAL - CLOSED GROOVE

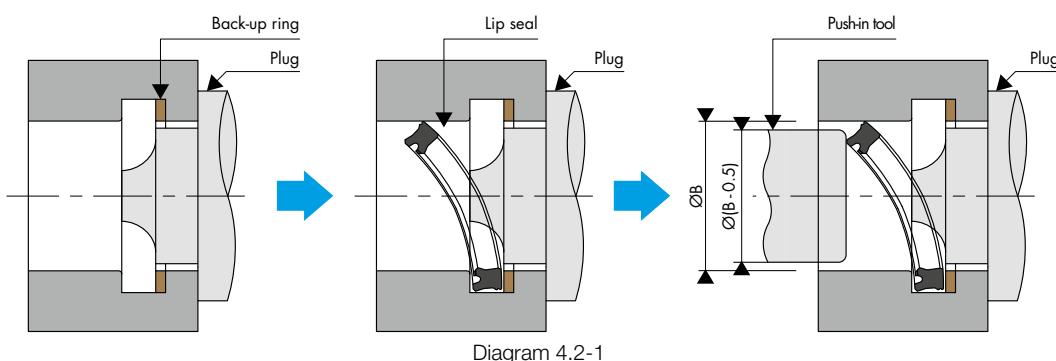

Applicable for the following product families: BECA 230, BECA 231, BECA 301, BECA 301/AE, BECA 320, BECA 322, BECA 325.

Using assembly tools:

- Prepare a push-in tool and a plug adapted to your application's dimensions.
- Clip one side of the lip seal into the groove and push the other part of the seal into place using the push-in tool (see diagram 4.2-1 opposite).
- Perform the entire operation without interruption to prevent the seal from becoming permanently warped.

If assembly tools fail:

- For seals with a back-up ring, first fit the seal in the groove followed by the back-up ring.
- Distort the lip seal by shaping it like a bean without creating a sharp angle (see diagram 4.1-2).
- Fit the lip seal into the groove.
- Calibrate the lip seal using a mandrel (see diagram 4.1-4).

4.3 ASSEMBLY 1.C – ROD SEALS - OPEN GROOVE

Applicable to all rod seals.

- The open groove assembly is simple and does not require any specific tools.
- For composite seals, prevent the seal's parts from becoming twisted and, for the final assembly (passing the rod through the seal), use the rod to calibrate the friction ring, provided the inlet chamfer is long enough. A calibration mandrel can also be used (see diagram 4.1-4).
- For lip seals, compo-compact and compact seals, use a push-in plug to push the seal onto its groove diameter. If the chamfer does not work at the bore, a bushing for assembly, chamfered 15° - 20° along a length of 30 mm, can be used positioned against the bore. (see diagram 4.3-1).

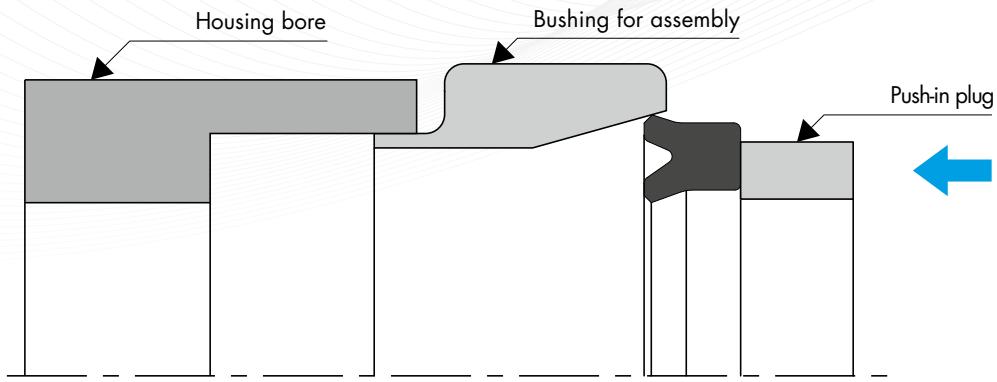

Diagram 4.3-1

5. Storage recommendations and lifespan

Seals, which are regularly used as spare parts, can be stored over a long-term period. During storage, rubbers are subject to physical alterations, meaning that they can sometimes become unusable due to deformation, hardening, softening or cracking when they are exposed to oxygen and ozone, light, heat, moisture, oils and solvents.

ISO Standard 2230: 2002 "Rubber Products - Guidelines for Storage" sets out the storage recommendations and length of storage for rubbers depending on material classification, in order to ensure optimal preservation of the physical and chemical features of parts.

Temperature

The temperature in the storage area must preferably be between +5°C and +25°C. If the temperature exceeds +25°C, the rubber seals may undergo physical changes, no longer retaining their original technical features, and may break down prematurely. All heat sources (radiators, lamps, sunlight, etc.) must be controlled so that the temperature does not exceed +25°C.

On the other hand, if the temperature in the storage area is below +5°C, the seals may become more rigid, which will not necessarily alter their chemical and physical features. Returning them to +20°C is advised before putting them into operation.

Humidity

Generally speaking, the relative humidity of the storage area should not exceed 70% for rubber seals (65% for polyurethane seals). Avoid humid areas, as well as areas that are prone to condensation.

Light

Rubber seals must not come into contact with sunlight or artificial light with a high UV ray content. Using normal incandescent lighting is recommended, as is covering windows in the storage area with a protective red or orange paint. Using special anti-UV bags will ensure that seals are better protected.

Radiation

Precautions must be taken to protect stored parts from all sources of ionising radiation.

Ozone

As ozone is very damaging to rubber seals, the storage area must not contain ozone-producing equipment, such as mercury-vapour lamps, high-voltage electrical equipment, electric motors or other products likely to produce soundless electrical charges or sparks. No combustible gases or organic vapours must be present, as their photochemical processes may lead to ozone production.

Distortion

Seals must preferably be stored where they are not subjected to constraints, pressures or any other force that could cause them to become misshapen. Seals should be kept in their original packaging as far as possible.

Contact with liquids and semi-liquids

Seals must not be stored in contact with liquids (acids, disinfectants, oils, greases, etc.) or other semi-liquid materials, unless packaged in this way by the manufacturer.

Contact with metals

Certain metals, such as manganese, iron, copper, brass and other compounds are damaging to rubbers. Seals must not be stored in contact with such metals unless the rubber parts are affixed to them, in which case a rolled packaging would be preferable.

Contact with other materials

Rubber seals must not be stored in contact with PVC due to the risk of potentially transferring plasticiser or other ingredients. Rubbers with different compositions must be separated from one another.

Cleaning

If necessary, clean seals with soap and water, or denatured alcohol. Cleaning with water should particularly be avoided for seals with textile fibre, and steel-rubber (corrosion problems) or polyurethane seals. Parts must be dried at ambient temperature and not near a heat source. Seals must not come into contact with wire brushes or sharp objects.

Storage and control

Storage duration largely depends on the type of material, rubbers being particularly sensitive to storage. The table below sets out the initial storage period.

Type of materials	Initial storage period	Extension period
NR - PU	5 years	2 years
ACM - AEM - CR - HNBR - NBR	7 years	3 years
EPDM - FFKM - FKM - FVMQ - VMQ	10 years	5 years
PTFE - PA6 - POM	Unlimited	-

Quality control is carried out at the end of this period. An extension may be possible, depending on the results.

6. Rod seals

The rod seals, mainly used in hydraulic cylinders, must ensure the sealing of fluids while meeting the conditions for extreme use. Whatever their form, whether it be a composite seal, a compact seal or a lip seal (also called a U-seal), we will assist you in selecting a seal whilst considering the different variables such as pressure, temperature, type of media, speed, frequency, surface roughness and other specific parameters.

IMPORTANT

The pressures, speeds and temperatures indicate the maximum values and may not be cumulated. Moreover, they may be developed depending on the materials used.

For specific orders (temperature, pressure, speed, etc.), please contact our technical team so that they can direct you towards the appropriate choice of material and seal profile.

The dimensions shown in the catalogue are usually in stock and can be sent quickly. However, we reserve the right to modify our delivery schedule. Please contact our sales team to find out our availabilities.

ROD SEALS BECA 002/5

DESCRIPTION

The BECA 002/5 profile is a 5-part chevron seal. This sealing system is composed of 2 textile-reinforced rubber shaft seals and 1 rubber ring. Its geometry means that it is encapsulated between a head nut and a locking ring.

ADVANTAGES

Strong sealing, tolerant to surface roughness defects (impacts on the rod, carbon deposits, etc.)

The tightness can be adjusted depending on the application

Excellent resistance to pressure

APPLICATIONS

Cylinders for extreme demands

Presses

Steel industry

Mining machines

Installations in corrosive and abrasive environments

MATERIALS

POM + NBR + fabric NBR + TPE

TECHNICAL DATA

Temperature	-30°C / +110°C
Pressure	40 MPa
Speed	0.5 m/s
Media	Mineral oils

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

EXTRUSION GAPS

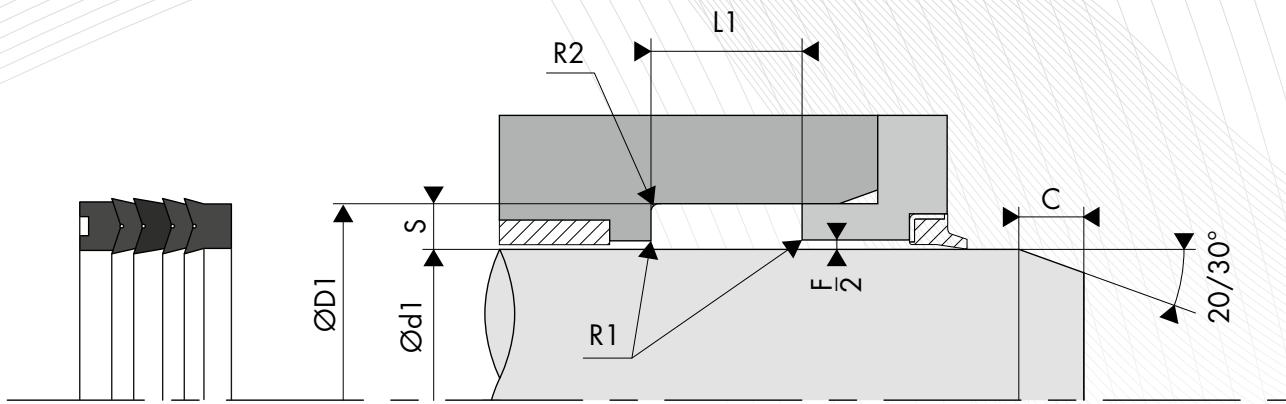

Radial section S	Radial gap F/2			
	16 MPa	26 MPa	32 MPa	40 MPa
≤ 5.00	0.50	0.40	0.35	-
≤ 7.50	0.55	0.45	0.40	0.35
≤ 12.50	0.60	0.50	0.45	0.40
≤ 15.00	0.65	0.55	0.45	0.40

SURFACE ROUGHNESS

Roughness	Dynamic surface area	Static surface area	Groove flanks
Ra	0.1 - 0.4 µm	≤1.6 µm	≤3.2 µm
Rz	0.63 - 2.5 µm	≤6.3 µm	≤10.0 µm
Rmax	1.0 - 4.0 µm	≤10.0 µm	≤16.0 µm

ROD SEALS BECA 002/7

DESCRIPTION

The BECA 002/7 profile is a 7-part chevron ring and is composed of 3 textile-reinforced rubber shaft seals and 2 rubber rings. Its geometry means that it is encapsulated between a head nut and a locking ring.

ADVANTAGES

Strong sealing, tolerant to surface roughness defects (impacts on the rod, carbon deposits, etc.)

The tightness can be adjusted depending on the application

Excellent resistance to pressure

APPLICATIONS

Cylinders for extreme demands

Presses

Steel industry

Mining machines

Installations in corrosive and abrasive environments

MATERIALS

POM + NBR + fabric NBR + TPE

TECHNICAL DATA

Temperature	-30°C / +110°C
Pressure	40 MPa
Speed	0.5 m/s
Media	Mineral oils

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

ROD SEALS BECA 150-152-154

DESCRIPTION

The BECA 150 - 152 - 154 profiles are single acting composite rod seals composed of a filled PTFE friction ring and pre-tightened rubber O'Ring. They can be assembled in grooves according to standard ISO 7425/2. Option of connecting the seal to a back-up ring.

ADVANTAGES

Optimal sealing in static and dynamic applications

Low friction coefficient;
no stick-slip effect

Excellent abrasion and
extrusion resistance

Wide temperature range and excellent
chemical resistance, depending on
the material selected for the O'Ring

APPLICATIONS

Mobile hydraulics

Injection presses

Machine tools

Presses

Standard cylinders

MATERIALS

Friction ring

Bronze-filled PTFE

Carbon-filled PTFE

Blue GL PTFE

O'Ring

NBR 70 Shore A

FKM 70 Shore A

Other grades of materials are
available. Please refer to the
materials table on the next page.

TECHNICAL DATA

Temperature	-30°C / +200°C
Pressure	50 MPa
Speed	5 m/s
Media	Mineral hydraulic oils Fire-resistant liquids Biocompatible fluids Water Others (contact our experts)

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

The figures highlighted in bold correspond to the rod diameters that are recommended by standard ISO 3320. Other intermediate sizes can be provided.

ROD SEALS BECA 151-153-155

○ DESCRIPTION

The BECA 151 - 153 - 155 profiles are double acting composite rod seals composed of a filled PTFE friction ring and pre-tightened rubber O'Ring. They can be assembled in grooves according to standard ISO 7425/2. Option of connecting the seal to 1 or 2 back-up rings.

○ ADVANTAGES

- Optimal sealing in static and dynamic applications
- Low friction coefficient; no stick-slip effect
- Excellent abrasion and extrusion resistance
- Wide temperature range and excellent chemical resistance, depending on the material selected for the O'Ring

○ APPLICATIONS

- Mobile hydraulics
- Injection presses
- Machine tools
- Presses
- Standard cylinders

○ MATERIALS

Friction ring
Bronze-filled PTFE
Carbon-filled PTFE
Blue GL PTFE

O'Ring
NBR 70 Shore A
FKM 70 Shore A

Other grades of materials are available. Please refer to the materials table on the next page.

○ TECHNICAL DATA

Temperature	-30°C / +200°C
Pressure	50 MPa
Speed	5 m/s
Media	Mineral hydraulic oils Fire-resistant liquids Biocompatible fluids Water Others (contact our experts)

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

○ EXTRUSION GAPS

Radial section S	Radial gap F/2		
	10 MPa	20 MPa	40 MPa
2.45	0.30	0.20	0.15
3.65	0.40	0.25	0.15
5.35	0.40	0.25	0.20
7.55	0.50	0.30	0.20
10.25	0.60	0.35	0.25
12.00	0.60	0.35	0.25
13.65	0.70	0.50	0.30
19.00	1.00	0.70	0.60

○ SURFACE ROUGHNESS

Roughness	Dynamic surface area	Static surface area	Groove flanks
Ra	0.05 - 0.2 µm	≤1.6 µm	≤3.2 µm
Rz	0.4 - 1.6 µm	≤6.3 µm	≤10.0 µm
Rmax	0.63 - 2.5 µm	≤10.0 µm	≤16.0 µm

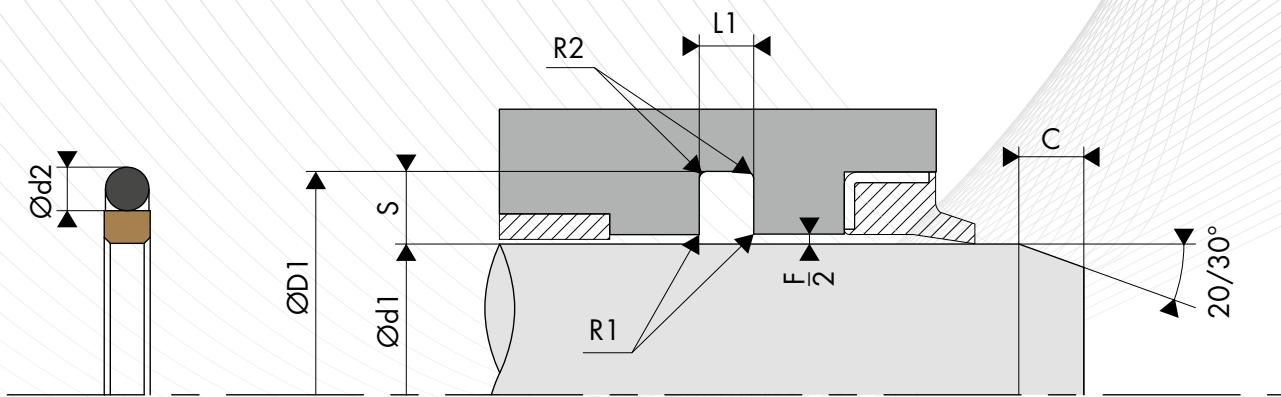

○ CHAMFERS AND RADIUS

Radial section S	Radius R1	Radius R2	Chamfer C
2.45	0.30	0.40	3.00
3.65	0.30	0.60	3.00
5.35	0.30	1.00	3.00
7.55	0.30	1.30	5.00
10.25	0.30	1.80	6.00
12.00	0.30	1.80	8.00
13.65	0.30	2.50	10.00
19.00	0.30	3.00	12.00

○ TABLE MATERIALS

Friction ring					O'Ring			Mating surface material
Standard code	ISO code	Material	Colour	Characteristics	Code	Type of material	Service temperature	
DP	P	Virgin PTFE	White	Resistance to chemical products Impermeability Dielectric Non-stick Low friction coefficient Food industry	K6	NBR 70 Shore A	-30°C/+100°C	Steel Stainless steel Chrome steel Aluminium Bronze Cast iron Treated surface
					G6	FKM 70 Shore A	-20°C/+200°C	
					C6	EPDM 70 Shore A	-45°C/+150°C	
					F6	VMQ 70 Shore A	-60°C/+200°C	
DC	C	PTFE + 25% Carbon	Grey	Improvements • Wear properties • Compression set Good resistance to chemical products Thermal and electrical conductivity Anti-static High-performing in compression-based dynamic applications	K6	NBR 70 Shore A	-30°C/+100°C	Steel Stainless steel Chrome steel Aluminium Bronze Cast iron Treated surface
					G6	FKM 70 Shore A	-20°C/+200°C	
					C6	EPDM 70 Shore A	-45°C/+150°C	
CG	C	PTFE + 23% Carbon + 2% Graphite	Black	Improvements • Wear properties • Mechanical strength Slightly more abrasive, however, this is corrected by adding MOS2 Maintains its chemical and dielectric properties Well-suited to applications with rotational and simultaneous alternating movements	K6	NBR 70 Shore A	-30°C/+100°C	Steel Stainless steel Chrome steel Aluminium Bronze Cast iron Treated surface
					G6	FKM 70 Shore A	-20°C/+200°C	
					C6	EPDM 70 Shore A	-45°C/+150°C	
DV	V	PTFE + 25 % Glass	Blue	Improvements • Wear properties • Mechanical strength Slightly more abrasive, however, this is corrected by adding MOS2 Maintains its chemical and dielectric properties Well-suited to applications with rotational and simultaneous alternating movements	K6	NBR 70 Shore A	-30°C/+100°C	Steel Stainless steel Chrome steel Aluminium Bronze Cast iron Treated surface
					G6	FKM 70 Shore A	-20°C/+200°C	
					K6	NBR 70 Shore A	-30°C/+100°C	
VM	M	PTFE + 15 % Glass + 5% MOS2	Grey	Improvements • Wear properties • Mechanical strength Slightly more abrasive, however, this is corrected by adding MOS2 Maintains its chemical and dielectric properties Well-suited to applications with rotational and simultaneous alternating movements	G6	FKM 70 Shore A	-20°C/+200°C	Steel Stainless steel Chrome steel Aluminium Bronze Cast iron
					K6	NBR 70 Shore A	-30°C/+100°C	
DX	X	PTFE GL Blue + Glass + Metal oxides	Turquoise blue	Resistance to compression Resistance to wear Excellent chemical stability Good thermal conductivity	K6	NBR 70 Shore A	-30°C/+100°C	Steel Stainless steel Chrome steel Aluminium Bronze Cast iron Treated surface
					G6	FKM 70 Shore A	-20°C/+200°C	
					K6	NBR 70 Shore A	-30°C/+100°C	
DG	G	PTFE + 15% Graphite	Black	Improvements • Wear properties Reduced wear on metal parts Self-lubricating Thermal and electrical conductivity Low permeability Good friction coefficient Anti-static High performing in dynamic self-lubricating applications	K6	NBR 70 Shore A	-30°C/+100°C	Steel Stainless steel Chrome steel Aluminium Bronze Cast iron Treated surface
					G6	FKM 70 Shore A	-20°C/+200°C	
					C6	EPDM 70 Shore A	-45°C/+150°C	
K1	K	PTFE + 10% Ekonol	Light brown	Improvements • Better abrasion resistance • Better dimensional stability at high temperatures Use up to +300°C Good friction coefficient and low permeability	K6	NBR 70 Shore A	-30°C/+100°C	Steel Stainless steel Chrome steel Aluminium Bronze Cast iron Treated surface
					G6	FKM 70 Shore A	-20°C/+200°C	
					C6	EPDM 70 Shore A	-45°C/+150°C	
K2	K	PTFE + 20% Ekonol	Light brown	Improvements • Better abrasion resistance • Better dimensional stability at high temperatures Use up to +300°C Good friction coefficient and low permeability	K6	NBR 70 Shore A	-30°C/+100°C	Steel Stainless steel Chrome steel Aluminium Bronze Cast iron Treated surface
					G6	FKM 70 Shore A	-20°C/+200°C	
					C6	EPDM 70 Shore A	-45°C/+150°C	
DB	B	PTFE + 60% Bronze	Dark brown	Improvements • Wear properties • Warping resistance and creep strength • Compression resistance Self-lubricating Electrical and thermal conductivity Does not alter the metal parts Reduced hold with certain chemical products Used for high-compression dynamic seals and has a low level of wear	K6	NBR 70 Shore A	-30°C/+100°C	Steel Stainless steel Chrome steel Aluminium Bronze Cast iron
					G6	FKM 70 Shore A	-20°C/+200°C	
					K6	NBR 70 Shore A	-30°C/+100°C	
B4	B	PTFE + 40% Bronze	Dark brown	Improvements • Wear properties • Warping resistance and creep strength • Compression resistance Self-lubricating Electrical and thermal conductivity Does not alter the metal parts Reduced hold with certain chemical products Used for high-compression dynamic seals and has a low level of wear	G6	FKM 70 Shore A	-20°C/+200°C	Steel Stainless steel Chrome steel Aluminium Bronze Cast iron
					K6	NBR 70 Shore A	-30°C/+100°C	
					G6	FKM 70 Shore A	-20°C/+200°C	
HG	HG	PE-UHMW	White or off-white	Excellent wear resistance on contact with water and air	K6	NBR 70 Shore A	-30°C/+80°C	Steel Stainless steel Chrome steel Aluminium Bronze Cast iron Treated surface
PU	U	Polyurethane	Blue	Strong mechanical resistance Good resistance to wear and abrasion High elasticity modulus	K6	NBR 70 Shore A	-30°C/+90°C	Steel Stainless steel Chrome steel Aluminium Bronze Cast iron Treated surface
PUHT	U	High-temperature polyurethane	White or off-white	Good flexibility Very good resistance to ozone and oxidation	K6	NBR 70 Shore A	-30°C/+100°C	

Other grades of materials are available depending on your specificities.

○ INSTALLATION DIMENSIONS

Rod diameter Ød1 f8/h9			Groove diameter	Groove width	Radial section	O'Ring cross-section
BECA 151 Standard range	BECA 153 Light range	BECA 155 Heavy-duty range	ØD1 H9	L1 0/+0.20	S	Ød2
3.0 - 7.9	8.0 - 18.9	---	d1 + 4.90	2.20	2.45	1.78

1000.0 - **	---	650.0 - 999.9	d1 + 38.00	13.80	19.00	12.00

For special applications > 40 MPa, we recommend using an H8/f8 tolerance (groove/rod) or selecting other, more suitable materials. Please contact our experts.

○ EXAMPLE OF CODIFICATION

STANDARD CODIFICATION

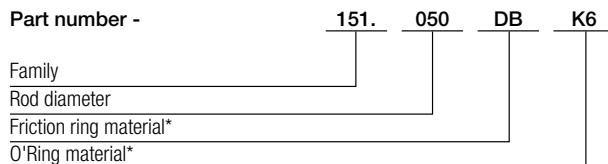

Materials _____ : Friction ring, PTFE + 60% Bronze - Code DB

_____ : NBR 70 Shore A O'Ring - Code K6

Rod diameter _____ : Ød1 = 50.00 mm

Groove diameter _____ : ØD1 = 65.10 mm

Part number _____ : 151.050DBK6

* The codes that define the materials are set out in the materials table on the previous page.

DIMENSIONS

The figures highlighted in bold correspond to the rod diameters that are recommended by standard ISO 3320. Other intermediate sizes can be provided.

ROD SEALS BECA 157-158

○ DESCRIPTION

The BECA 157 - 158 profile is a double acting rod composite seal composed of a filled PTFE friction ring and two pre-tightened rubber O'Rings. It can be assembled in a groove according to standard ISO 7425/2. Option of connecting the seal to 1 or 2 back-up rings.

○ ADVANTAGES

Optimal sealing for separating two fluids
Low friction coefficient;
no stick-slip effect
Excellent abrasion resistance
Wide temperature range and excellent chemical resistance, depending on the material selected for the O'Ring

○ APPLICATIONS

Mobile hydraulics
Machine tools
Presses
Hydro-pneumatic suspension systems

○ MATERIALS

Friction ring
Bronze-filled PTFE
O'Rings
NBR 70 Shore A

Other grades of materials are available. Please refer to the materials table on the next page.

○ TECHNICAL DATA

Temperature	-30°C / +200°C
Pressure	50 MPa
Speed	2 m/s
Media	Mineral hydraulic oils Fire-resistant liquids Biocompatible fluids Water Gas Others (contact our experts)

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

○ EXTRUSION GAPS

Radial section S	Radial gap F/2		
	10 MPa	20 MPa	40 MPa
5.50	0.25	0.15	0.10
7.75	0.30	0.20	0.15
10.50	0.30	0.20	0.15
12.25	0.30	0.20	0.15
14.00	0.45	0.30	0.25
19.00	0.55	0.40	0.35

○ SURFACE ROUGHNESS

Roughness	Dynamic surface area	Static surface area	Groove flanks
Ra	0.05 - 0.2 µm	≤1.6 µm	≤3.2 µm
Rz	0.4 - 1.6 µm	≤6.3 µm	≤10.0 µm
Rmax	0.63 - 2.5 µm	≤10.0 µm	≤16.0 µm

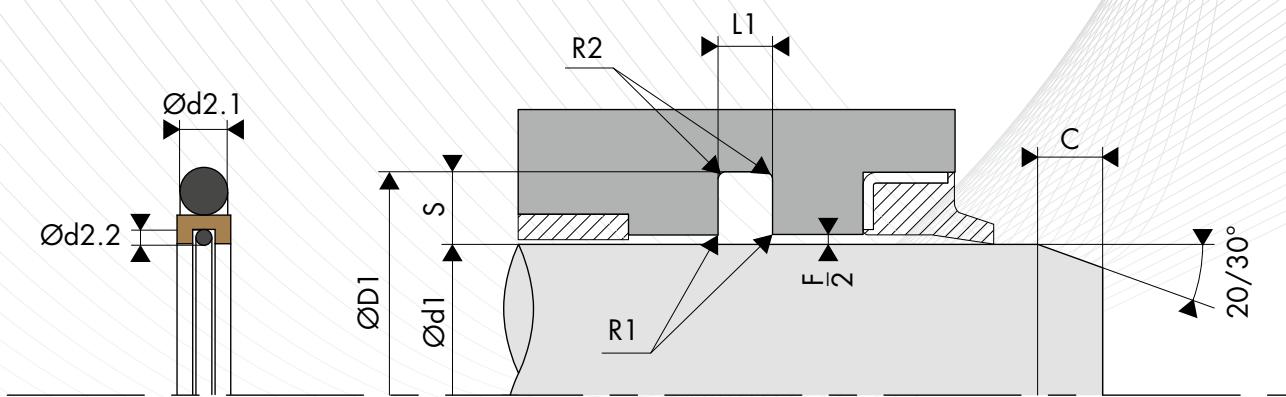

○ CHAMFERS AND RADIUS

Radial section S	Radius R1	Radius R2	Chamfer C
5.50	0.30	1.00	3.00
7.75	0.30	1.30	3.00
10.50	0.30	1.80	5.00
12.25	0.30	1.80	6.00
14.00	0.30	2.50	8.00
19.00	0.30	3.00	10.00

TABLE MATERIALS

The figures highlighted in bold correspond to the dimensions for standard ISO 7425/2, with the rod diameters in line with standard ISO 3320. Other intermediate sizes can be provided.

ROD SEALS BECA 161-163-165

○ DESCRIPTION

The BECA 161-163-165 profiles are double acting composite rod seals composed of a pre-tightened rubber O'Ring and a custom-made polyurethane friction ring.

○ ADVANTAGES

Optimal sealing in static and dynamic applications
Excellent abrasion and wear resistance

○ APPLICATIONS

Agriculture
Light and medium-sized industry
Machine tools
Material handling/Lifting

○ MATERIALS

Friction ring

PU 93 Shore A - Blue

PU 96 Shore A - Blue

High temp. PU 96 Shore A - Beige

O'Ring

NBR 70 Shore A

Other grades of materials are available. Please refer to the materials table on the next page.

○ TECHNICAL DATA

Temperature	-30°C / +100°C
Pressure	25 MPa
Speed	0.5 m/sec
Media	Mineral hydraulic oils

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

○ EXTRUSION GAPS

Radial section S	Radial gap F/2
2.45	0.20
3.65	0.25
5.35	0.25
7.55	0.30
10.25	0.30
12.00	0.35
13.65	0.35
19.00	0.40

○ SURFACE ROUGHNESS

Roughness	Dynamic surface area	Static surface area	Groove flanks
Ra	0.1 - 0.4 µm	≤1.6 µm	≤3.2 µm
Rz	0.63 - 2.5 µm	≤6.3 µm	≤10.0 µm
Rmax	1.0 - 4.0 µm	≤10.0 µm	≤16.0 µm

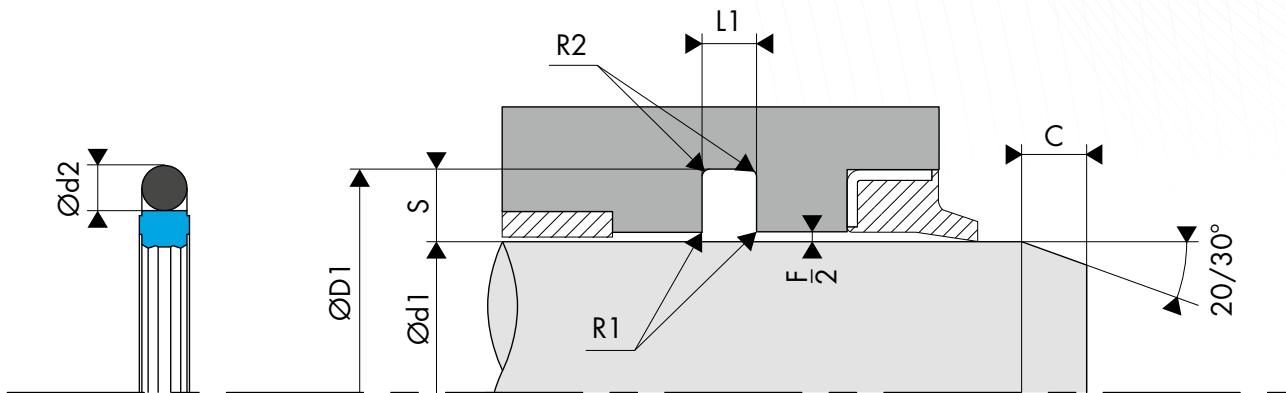

○ CHAMFERS AND RADIUS

Radial section S	Radius R1	Radius R2	Chamfer C
2.45	0.30	0.40	0.55
3.65	0.30	0.60	0.70
5.35	0.30	1.00	0.95
7.55	0.30	1.30	1.35
10.25	0.30	1.80	1.75
12.00	0.30	1.80	1.75
13.65	0.30	2.50	10.00
19.00	0.30	3.00	12.00

○ TABLE MATERIALS

Friction ring					O'Ring			Mating surface material
Standard code	ISO code	Material	Colour	Characteristics	Code	Type of material	Service temperature	
HG	HG	PE-UHMW	White or off-white	Excellent wear resistance on contact with water and air	K6	NBR 70 Shore A	-30°C/+80°C	Steel
PU	U	Polyurethane	Blue	Strong mechanical resistance Good resistance to wear and abrasion High elasticity modulus	K6	NBR 70 Shore A	-30°C/+90°C	Stainless steel
PUHT	U	High-temperature polyurethane	White or off-white	Good flexibility Very good resistance to ozone and oxidation	K6	NBR 70 Shore A	-30°C/+100°C	Chrome steel Aluminium Bronze Cast iron Treated surface

Other grades of materials are available depending on your specificities.

The figures highlighted in bold correspond to the rod diameters that are recommended by standard ISO 3320. Other intermediate sizes can be provided.

ROD SEALS BECA 170-179

DESCRIPTION

The BECA 170 - 179 profiles are double acting composite rod seals composed of a filled PTFE friction ring and pre-tightened rubber O'Ring. They can be mounted in the grooves of the O'Rings. Option of connecting the seal to 1 or 2 back-up rings.

ADVANTAGES

Suitable for a reduced size

Low friction coefficient;
no stick-slip effect

Excellent extrusion and wear resistance

Wide temperature range and excellent chemical resistance, depending on the material selected for the O'Ring

APPLICATIONS

Machine tools

Lifting systems

Valves

MATERIALS

Friction ring

Bronze-filled PTFE

Carbon-filled PTFE

Virgin PTFE

O'Ring

NBR 70 Shore A

FKM 70 Shore A

VMQ 70 Shore A

Other grades of materials are available. Please refer to the materials table on the next page.

TECHNICAL DATA

Temperature	-30°C / +200°C
Pressure	35 MPa
Speed	5 m/s
Media	Mineral hydraulic oils Fire-resistant liquids Biocompatible fluids Others (contact our experts)

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

EXTRUSION GAPS

Radial section S	Radial gap F/2			
	2 MPa	10 MPa	20 MPa	35 MPa
1.45	0.10	0.10	0.08	0.05
2.25	0.15	0.15	0.10	0.07
3.10	0.25	0.20	0.15	0.08
4.70	0.35	0.25	0.20	0.10
6.10	0.50	0.30	0.25	0.15
7.50	0.60	0.40	0.30	0.20

SURFACE ROUGHNESS

Roughness	Dynamic surface area	Static surface area	Groove flanks
Ra	0.05 - 0.2 µm	≤1.6 µm	≤3.2 µm
Rz	0.4 - 1.6 µm	≤6.3 µm	≤10.0 µm
Rmax	0.63 - 2.5 µm	≤10.0 µm	≤16.0 µm

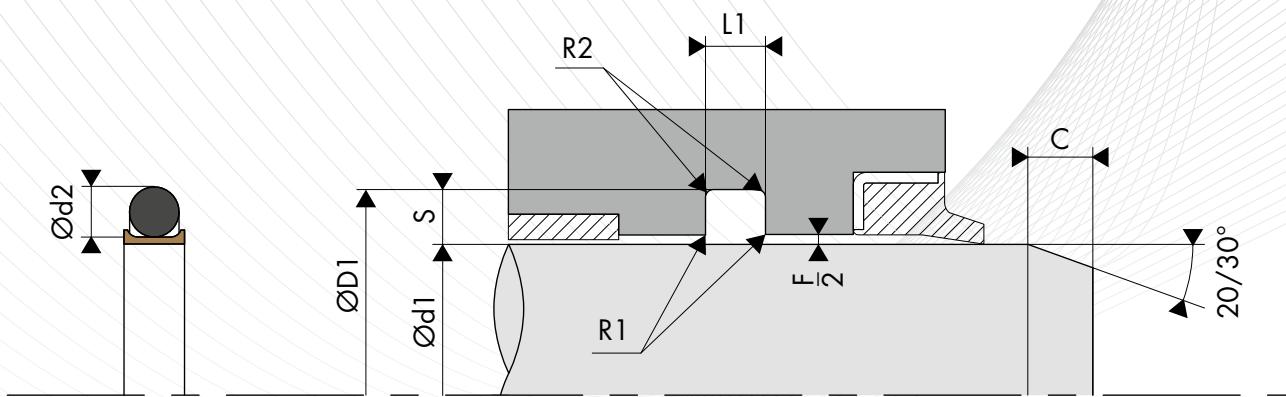

CHAMFERS AND RADIUS

Radial section S	Radius R1	Radius R2	Chamfer C
1.45	0.30	0.40	3.00
2.25	0.30	0.40	3.00
3.10	0.30	0.60	3.00

ROD SEALS BECA 190

DESCRIPTION

The BECA 190 profile is a compact rod seal composed of a profiled rubber ring and a POM back-up ring on the back as standard. It can be assembled in a groove according to standard ISO 5597.

ADVANTAGES

Excellent wear resistance
Good chemical resistance
Can be assembled in a closed groove for $\text{Ø}d1 \geq 30.00 \text{ mm}$

APPLICATIONS

Mobile hydraulics
Presses
Aftermarket
Standard cylinders

MATERIALS

Profiled seal
NBR 80 Shore A
FKM 80 Shore A
Back-up ring
Polyoxymethylene - POM
Bronze-filled PTFE

Other grades of materials are available.

The figures highlighted in bold correspond to the dimensions for standard ISO 5597, with the rod diameters in line with standard ISO 3320. Other intermediate sizes can be provided.

ROD SEALS BECA 200

DESCRIPTION

The BECA 200 profile is a compact rod seal composed of a fabric part, a rubber part and a POM back-up ring as standard. It can be assembled in a groove according to standard ISO 5597.

ADVANTAGES

Excellent wear resistance
Excellent resistance to high pressures
Good chemical resistance
Can be assembled in a closed groove for $\text{Ø}d1 \geq 35.00$ mm

APPLICATIONS

Mobile hydraulics
Presses
Aftermarket
Standard cylinders

MATERIALS

Profiled seal
NBR 80 Shore A
FKM 80 Shore A
Back-up ring
Polyoxymethylene - POM
Bronze-filled PTFE

Other grades of materials are available.
Please contact our experts.

TECHNICAL DATA

ROD SEALS BECA 202

○ DESCRIPTION

The BECA 202 is a compo-compact rod seal composed of a flexible NBR ring, a fabric NBR support on the back and a polyoxymethylene back-up ring.

○ ADVANTAGES

Excellent sealing under high pressure
Good extrusion resistance
Good sealing in difficult environments

○ APPLICATIONS

Hydraulic cylinders
Earth-moving machinery
Mining machinery

○ MATERIALS

NBR 90 Shore A + POM + TPE

○ TECHNICAL DATA

Temperature	-30°C / +100°C
Pressure	70 MPa
Speed	0.5 m/sec
Media	Mineral oils HFA, HFB and HFC hydraulic fluids

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

○ EXTRUSION GAPS

ROD SEALS BECA 230

DESCRIPTION

The BECA 230 profile is a U-ring type single acting rod seal with offset rubber lips.

ADVANTAGES

Optimised sealing effect
Excellent resistance to high temperatures depending on the type of material chosen
Assembly by deformation in closed groove

APPLICATIONS

Mobile hydraulics
Machine tools
Presses
Standard cylinders

MATERIALS

NBR 70 Shore A
NBR 85 Shore A
FKM 85 Shore A

Other grades of materials are available.
Please contact our experts.

TECHNICAL DATA

Temperature	-30°C / +200°C
Pressure	15 MPa
Speed	0.5 m/sec
Media	Mineral hydraulic oils Fire-resistant liquids Biocompatible fluids Water Others (contact our experts)

The figures highlighted in bold correspond to the dimensions for standard ISO 5597, with the rod diameters in line with standard ISO 3320. Other intermediate sizes can be provided.

ROD SEALS BECA 230/B

○ DESCRIPTION

The BECA 230/B profile is a rubber single acting rod seal with symmetrical lips and a second sealing lip. It can be assembled in a groove according to standard ISO 5597.

○ ADVANTAGES

Optimised sealing effect at both high and low pressures
Excellent abrasion and wear resistance
Assembly by deformation in closed groove

○ APPLICATIONS

Mobile hydraulics
Injection presses
Machine tools
Presses
Hydraulic cylinders

○ MATERIALS

PU 93 Shore A - Blue
PU 96 Shore A - Blue
High temp. PU 96 Shore A - Beige

Other grades of materials are available.
Please contact our experts.

○ TECHNICAL DATA

Temperature	-30°C / +200°C
Pressure	15 MPa
Speed	0.5 m/sec
Media	Mineral hydraulic oils

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

○ EXTRUSION GAPS

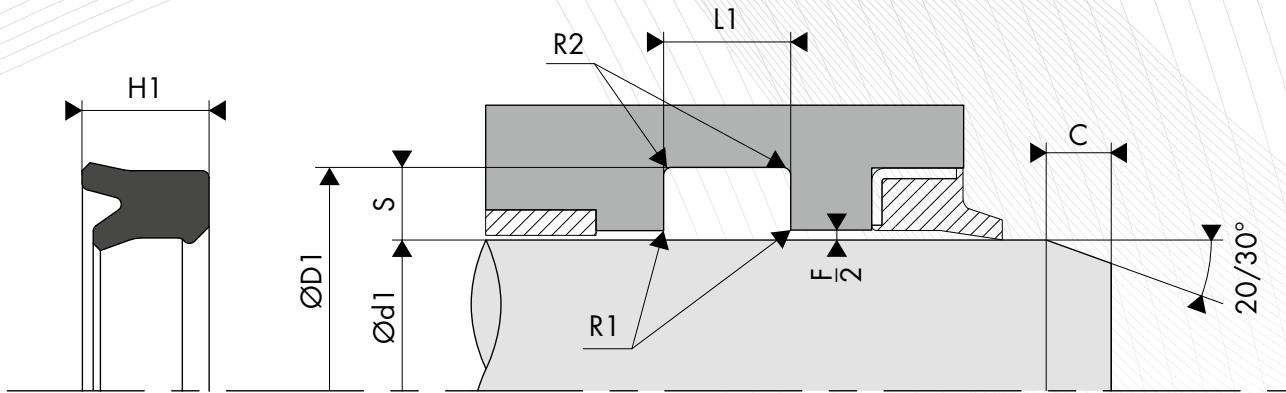

Pressure MPa	Radial gap F/2
2.5 MPa	0.45
5.0 MPa	0.35
7.5 MPa	0.30
10.0 MPa	0.25
15.0 MPa	0.20

○ SURFACE ROUGHNESS

Roughness	Dynamic surface area	Static surface area	Groove flanks
Ra	0.1 - 0.4 µm	≤1.6 µm	≤3.2 µm
Rz	0.63 - 2.5 µm	≤6.3 µm	≤10.0 µm
Rmax	1.0 - 4.0 µm	≤10.0 µm	≤16.0 µm

○ CHAMFERS AND RADIUS

Radial section S	Radius R1	Radius R2	Chamfer C
3.50	0.20	0.40	2.00

ROD SEALS BECA 231

○ DESCRIPTION

The BECA 231 profile is a U-ring type single acting rod seal with offset polyurethane lips. It can be assembled in a groove according to standard ISO 5597.

○ ADVANTAGES

Optimised sealing effect at both high and low pressures
Excellent abrasion and extrusion resistance
Assembly by deformation in closed groove

○ APPLICATIONS

Mobile hydraulics
Injection presses
Machine tools
Presses
Hydraulic cylinders

○ MATERIALS

PU 93 Shore A - Blue
PU 96 Shore A - Blue
High temp. PU 96 Shore A - Beige

Other grades of materials are available.

The figures highlighted in bold correspond to the dimensions for standard ISO 5597, with the rod diameters in line with standard ISO 3320. Other intermediate sizes can be provided.

ROD SEALS BECA 231/B

○ DESCRIPTION

The BECA 231/B profile is a polyurethane U-ring type single acting rod seal with offset lips, symmetrical lips and a second sealing lip. It can be assembled in a groove according to standard ISO 5597.

○ ADVANTAGES

Optimised sealing effect at both high and low pressures
Excellent abrasion and wear resistance
Assembly by deformation in closed groove

○ APPLICATIONS

Mobile hydraulics
Injection presses
Machine tools
Presses
Hydraulic cylinders

○ MATERIALS

PU 93 Shore A - Blue
PU 96 Shore A - Blue
High temp. PU 96 Shore A - Beige

Other grades of materials are available.
Please contact our experts.

○ TECHNICAL DATA

Temperature	-30°C / +110°C
Pressure	40 MPa
Speed	0.5 m/sec
Media	Mineral hydraulic oils

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

○ EXTRUSION GAPS

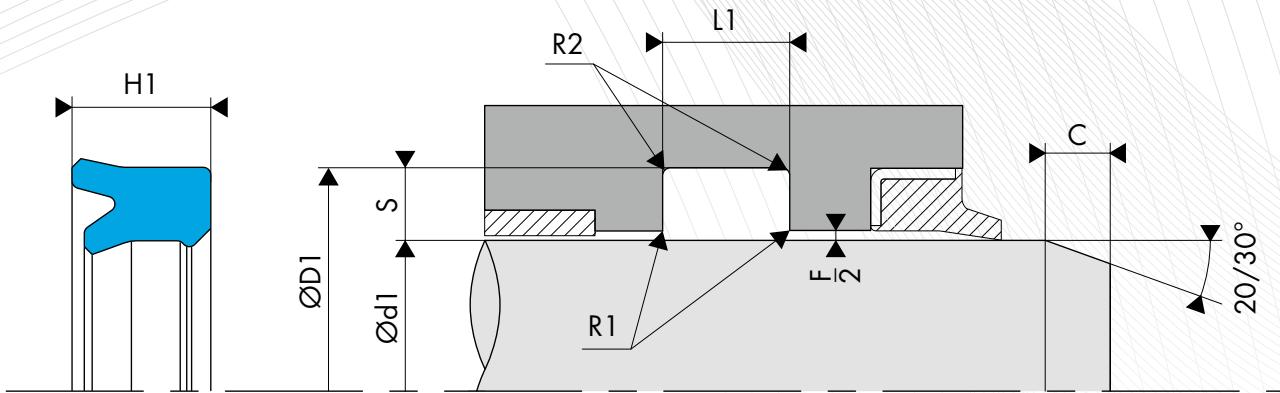

Diameter of the rod Ød1	Radial gap F/2				
	≤ 5 MPa	≤ 10 MPa	≤ 20 MPa	≤ 30 MPa	≤ 40 MPa
≤ 60 mm	0.40	0.30	0.20	0.15	0.10
> 60 mm	0.50	0.40	0.30	0.20	0.15

○ SURFACE ROUGHNESS

Roughness	Dynamic surface area	Static surface area	Groove flanks
Ra	0.1 - 0.4 µm	≤1.6 µm	≤3.2 µm
Rz	0.63 - 2.5 µm	≤6.3 µm	≤10.0 µm
Rmax	1.0 - 4.0 µm	≤10.0 µm	≤16.0 µm

ROD SEALS BECA 231/AE

○ DESCRIPTION

The BECA 231/AE profile is a polyurethane U-ring type single acting rod seal with offset lips, with a POM back-up ring integrated into the back. It can be assembled in a groove according to standard ISO 5597.

○ ADVANTAGES

- Optimised sealing effect at both high and low pressures
- Excellent abrasion and wear resistance
- Assembly by deformation in closed groove

○ APPLICATIONS

- Mobile hydraulics
- Injection presses
- Machine tools
- Presses
- Hydraulic cylinders

○ MATERIALS

Profiled seal

- PU 93 Shore A - Blue
- PU 96 Shore A - Blue

High temp. PU 96 Shore A - Beige

Back-up ring

- Polyoxymethylene - POM

Other grades of materials are available.
Please contact our experts.

○ TECHNICAL DATA

Temperature	-30°C / +110°C
Pressure	45 MPa
Speed	0.5 m/sec

ROD SEALS BECA 239

DESCRIPTION

The BECA 239 profile is a U-ring type single acting rod seal with offset lips composed of a profiled rubber seal and a bronze-filled PTFE back-up ring on the back.

ADVANTAGES

Optimised sealing effect at average and higher pressures
Good extrusion resistance

APPLICATIONS

Mobile hydraulics
Material handling - Lifting
Hydraulic cylinders

MATERIALS

Profiled seal

NBR 85 Shore A

Back-up ring

Bronze-filled PTFE

Other grades of materials are available.
Please contact our experts.

TECHNICAL DATA

Temperature	-30°C / +200°C
Pressure	25 MPa
Speed	0.5 m/sec
Media	Mineral hydraulic oils Fire-resistant liquids Biocompatible fluids Water Others (contact our experts)

ROD SEALS BECA 300

DESCRIPTION

The BECA 300 profile is a single acting compo-compact rod seal composed of a profiled rubber seal and a filled PTFE or POM back-up ring on the back depending on the type of application.

ADVANTAGES

- Optimised sealing effect
- Good chemical compatibility, depending on the material chosen
- Excellent wear resistance
- Excellent extrusion resistance

APPLICATIONS

- Mobile hydraulics
- Material handling - Lifting
- Presses
- Hydraulic cylinders

MATERIALS

Profiled seal

NBR 80 Shore A

FKM 80 Shore A

Back-up ring

Polyoxymethylene - POM

Bronze-filled PTFE

Other grades of materials are available.
Please contact our experts.

TECHNICAL DATA

Temperature	-30°C / +200°C
Pressure	27.5 MPa
Speed	0.5 m/sec
Media	Mineral hydraulic oils Fire-resistant liquids Biocompatible fluids Water Others (contact our experts)

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

EXTRUSION GAPS

ROD SEALS BECA 302/AE

○ DESCRIPTION

The BECA 302/AE profile is a single acting compact rod seal composed of a profiled FKM seal and a bronze-filled PTFE back-up ring on the back. It can be assembled in a groove according to standard ISO 5597.

○ ADVANTAGES

- Optimised sealing effect
- Good chemical compatibility and wide temperature range, depending on the material chosen
- Excellent wear resistance
- Excellent extrusion resistance

○ APPLICATIONS

- Mobile hydraulics
- Material handling - Lifting
- Presses
- Hydraulic cylinders

○ MATERIALS

- Profiled seal**
FKM 80 Shore A
- Back-up ring**
Bronze-filled PTFE

○ TECHNICAL DATA

Temperature	-20°C / +200°C
Pressure	35 MPa
Speed	0.5 m/sec
Media	Mineral hydraulic oils Fire-resistant liquids Biocompatible fluids Water Others (contact our experts)

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

ROD SEALS BECA 312

○ DESCRIPTION

The BECA 312 profile is a U-ring type single acting compact rod seal with matching lips and made of a very dense polyurethane body and a POM back-up ring on the back.

○ ADVANTAGES

Good sealing at both high and low pressures
Excellent abrasion resistance
Excellent extrusion resistance

○ APPLICATIONS

Mobile hydraulics
Material handling - Lifting
Presses
Hydraulic cylinders

○ MATERIALS

Profiled seal
PU 93 Shore A - Blue
PU 96 Shore A - Blue
High temp. PU 96 Shore A - Beige
Back-up ring
Polyoxymethylene - POM

Other grades of materials are available.
Please contact our experts.

ROD SEALS BECA 315

○ DESCRIPTION

The BECA 315 profile is a single acting buffer rod seal composed of a profiled polyurethane triple lip seal and a POM back-up ring on the back.

○ ADVANTAGES

- Primary seal
- Low friction coefficient
- Excellent abrasion resistance
- Excellent extrusion resistance

○ APPLICATIONS

- Agriculture
- Mobile machinery
- Injection presses
- Hydraulic cylinders

○ MATERIALS

Profiled seal
 PU 93 Shore A - Blue
 PU 96 Shore A - Blue
 High temp. PU 96 Shore A - Beige

Back-up ring
 Polyoxymethylene - POM

Other grades of materials are available.
 Please contact our experts.

○ TECHNICAL DATA

Temperature	-30°C / +110°C
Pressure	40 MPa (peak at 60 MPa)
Speed	0.5 m/sec
Media	Mineral hydraulic oils

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

The figures highlighted in bold correspond to the dimensions for standard ISO 5597, with the rod diameters in line with standard ISO 3320. Other intermediate sizes can be provided.

ROD SEALS BECA 316

○ DESCRIPTION

The BECA 316 profile is a single acting buffer rod seal with offset lips composed of a profiled polyurethane seal and a POM back-up ring on the back.

○ ADVANTAGES

- Primary seal
- Low friction coefficient
- Excellent abrasion resistance
- Excellent extrusion resistance

○ APPLICATIONS

- Agriculture
- Mobile machinery
- Injection presses
- Hydraulic cylinders

○ MATERIALS

Profiled seal
PU 96 Shore A - Blue
High temp. PU 96 Shore A - Beige

Back-up ring
Polyoxymethylene - POM

Other grades of materials are available.
Please contact our experts.

○ TECHNICAL DATA

Temperature	-30°C / +110°C
Pressure	40 MPa (peak at 60 MPa)
Speed	1 m/s
Media	Mineral hydraulic oils

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

○ EXTRUSION GAPS

ROD SEALS BECA 322

DESCRIPTION

The BECA 322 profile is a U-ring type single acting rod seal with matching lips, composed of a profiled polyurethane seal, a NBR O'Ring to preserve its elastic memory and a triangular POM back-up ring on the back. It can be assembled in a groove according to standard ISO 5597.

ADVANTAGES

- Very good sealing at low pressures
- Elastic memory preserved using the O'Ring
- Excellent abrasion resistance
- Very good extrusion resistance

APPLICATIONS

- Agriculture
- Mobile machinery
- Lifting systems
- Injection presses
- Hydraulic cylinders

MATERIALS

Profiled seal

- PU 93 Shore A - Blue
- PU 96 Shore A - Blue
- High temp. PU 96 Shore A - Beige

O'Ring

- NBR 70 Shore A

Back-up ring

- Polyoxymethylene - POM

Other grades of materials are available.
Please contact our experts.

ROD SEALS BECA 325

○ DESCRIPTION

The BECA 325 profile is a U-ring type single acting rod seal with matching lips, composed of a profiled polyurethane seal, a NBR O'Ring to preserve its elastic memory and a POM back-up ring on the back. It can be assembled in a groove according to standard ISO 5597.

○ ADVANTAGES

Very good sealing at low pressures
Elastic memory preserved using the O'Ring
Excellent abrasion resistance
Very good extrusion resistance

○ APPLICATIONS

Agriculture
Mobile machinery
Lifting systems
Injection presses
Hydraulic cylinders

○ MATERIALS

Profiled seal

PU 93 Shore A - Blue
PU 96 Shore A - Blue
High temp. PU 96 Shore A - Beige

O'Ring

NBR 70 Shore A

Back-up ring

Polyoxymethylene - POM

Other grades of materials are available.
Please contact our experts.

○ TECHNICAL DATA

Temperature	-30°C / +100°C
Pressure	45 MPa
Speed	0.5 m/sec
Media	Mineral hydraulic oils

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

○ EXTRUSION GAPS

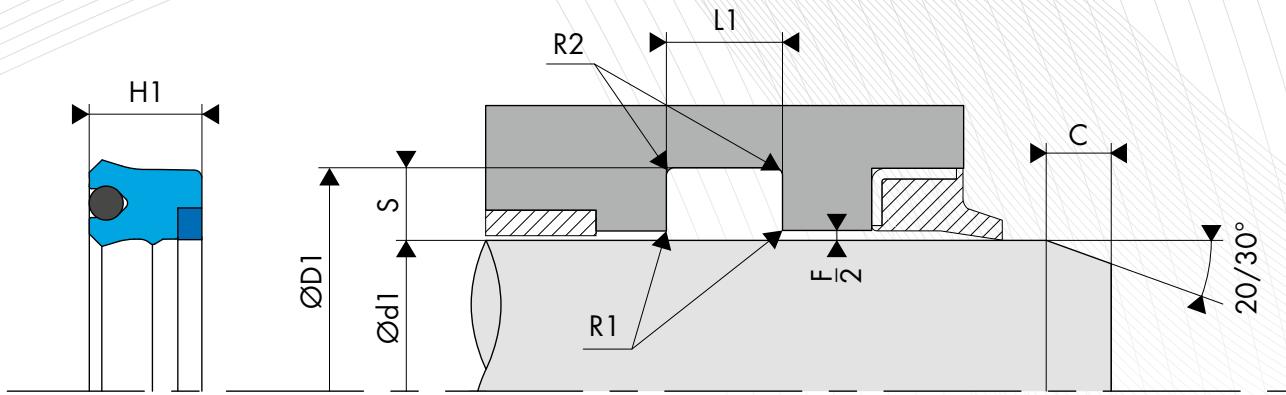

Pressure MPa	Radial gap F/2
25 MPa	0.35
35 MPa	0.30
40 MPa	0.25
45 MPa	0.20

○ SURFACE ROUGHNESS

The figures highlighted in bold correspond to the dimensions for standard ISO 5597, with the rod diameters in line with standard ISO 3320. Other intermediate sizes can be provided.

ROD SEALS BECA 340-349

DESCRIPTION

The BECA 340 profile is a single acting rod seal composed of a profiled, filled PTFE U-ring type seal and a V-spring that is resistant to corrosion.

The BECA 349 profile is specially designed for applications where the seal is in contact with food products. It is characterised by a silicone overmoulding on the inside of the seal, which completely hides the V-spring, thus preventing impurities from accumulating in this hard-to-clean area.

ADVANTAGES

Wide temperature range and excellent chemical resistance
Low friction coefficient; no stick-slip effect
Excellent abrasion resistance
Good dimensional stability
Non-toxic material

APPLICATIONS

Food & Beverage
Medical
Pharmaceutical
Static hydraulics

MATERIALS

Profiled seal
Carbon-filled PTFE
Blue GL PTFE
PE-UHMW
V-Shaped spring
Stainless steel

Other grades of materials are available. Please refer to the materials table on the next page.

TECHNICAL DATA

Temperature	-200°C / +260°C
Pressure	40 MPa
Speed	15 m/s
Media	Practically all types of fluids, and chemical and gas products

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

EXTRUSION GAPS

Radial section S	Radial gap F/2			
	2 MPa	10 MPa	20 MPa	40 MPa
1.45	0.20	0.10	0.08	0.05
2.25	0.25	0.15	0.10	0.07
3.10	0.35	0.20	0.15	0.08
4.70	0.50	0.25	0.20	0.10
6.10	0.60	0.30	0.25	0.12
9.50	0.90	0.50	0.40	0.20

SURFACE ROUGHNESS

Roughness	Dynamic surface area	Static surface area	Groove flanks
Ra	0.05 - 0.2 µm	≤1.6 µm	≤3.2 µm
Rz	0.4 - 1.6 µm	≤6.3 µm	≤10.0 µm
Rmax	0.63 - 2.5 µm	≤10.0 µm	≤16.0 µm

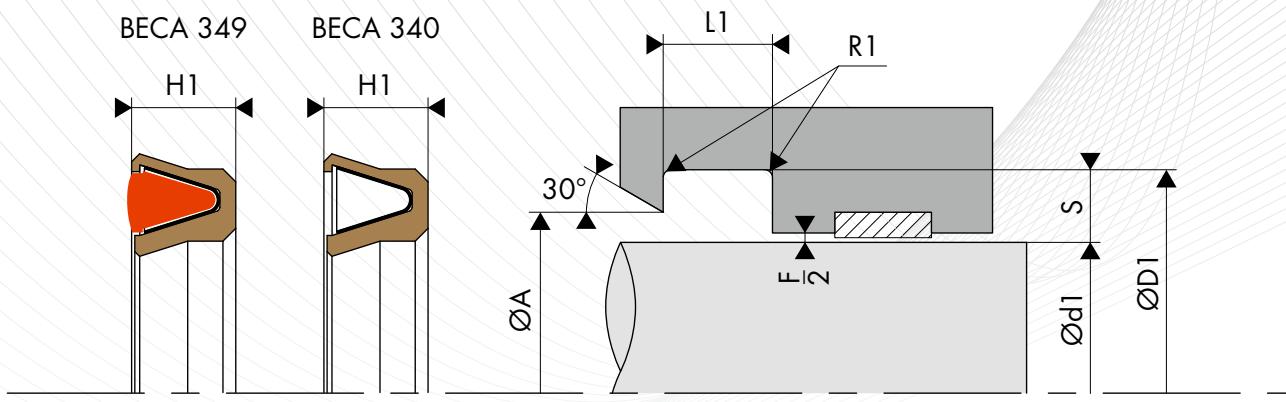

CHAMFERS AND RADIUS

Radial section S	Radius R1	Chamfer C
1.45	0.40	3.00
2.25	0.40	3.00
3.10	0.60	3.00
4.70	0.80	3.00
6.10	0.80	3.50
9.50	0.80	6.50

TABLE MATERIALS

Profiled seal					V-spring			Mating surface material
Standard code	ISO code	Material	Colour	Characteristics	Code	Type of material	Service temperature	
DP	P	Virgin PTFE	White	Resistance to chemical products Impermeability Dielectric Non-stick Low friction coefficient Food industry	I	X10 Cr Ni 18-8	-200°C/+260°C	Steel Stainless steel Chrome steel Aluminium Bronze Cast iron Treated surface
DC	C	PTFE + 25% Carbon	Grey	Improvements • Wear properties • Compression set Good resistance to chemical products Thermal and electrical conductivity Anti-static High-performing in compression-based dynamic applications	I	X10 Cr Ni 18-8	-200°C/+260°C	
CG	C	PTFE + 23% Carbon + 2% Graphite	Black		I	X10 Cr Ni 18-8	-200°C/+260°C	
DV	V	PTFE + 25 % Glass	Blue	Improvements • Wear properties • Mechanical strength Slightly more abrasive, however, this is corrected by adding MOS2 Maintains its chemical and dielectric properties Well-suited to applications with rotational and simultaneous alternating movements	I	X10 Cr Ni 18-8	-200°C/+260°C	
VM	M	PTFE + 15 % Glass + 5% MOS2	Grey		I	X10 Cr Ni 18-8	-200°C/+260°C	Steel Chrome steel Cast iron
DX	X	PTFE GL Blue + Glass + Metal oxides	Turquoise blue	Resistance to compression Resistance to wear Excellent chemical stability Good thermal conductivity	I	X10 Cr Ni 18-8	-200°C/+260°C	
DG	G	PTFE + 15% Graphite	Black	Improvements • Wear properties Reduced wear on metal parts Self-lubricating Thermal and electrical conductivity Low permeability Good friction coefficient Anti-static High performing in dynamic self-lubricating applications	I	X10 Cr Ni 18-8	-200°C/+260°C	Steel Stainless steel Chrome steel Aluminium Bronze Cast iron Treated surface
K1	K	PTFE + 10% Ekonol	Light brown	Improvements • Better abrasion resistance • Better dimensional stability at high temperatures	I	X10 Cr Ni 18-8	-200°C/+260°C	
K2	K	PTFE + 20% Ekonol	Light brown	Use up to +300°C Good friction coefficient and low permeability	I	X10 Cr Ni 18-8	-200°C/+260°C	
DB	B	PTFE + 60% Bronze	Dark brown	Improvements • Wear properties • Warping resistance and creep strength • Compression resistance Self-lubricating Electrical and thermal conductivity Does not alter the metal parts Reduced hold with certain chemical products Used for high-compression dynamic seals and has a low level of wear	I	X10 Cr Ni 18-8	-200°C/+260°C	Steel Chrome steel Cast iron
B4	B	PTFE + 40% Bronze	Dark brown		I	X10 Cr Ni 18-8	-200°C/+260°C	
HG	HG	PE-UHMW	White or off-white	Excellent wear resistance on contact with water and air	I	X10 Cr Ni 18-8	-70°C/+80°C	Steel Stainless steel Chrome steel Aluminium Bronze Cast iron Treated surface

Other grades of materials are available depending on your specificities.

○ INSTALLATION DIMENSIONS

Series	Rod diameter Ød1 h9		Groove diameter	Groove width	Radial section	Step height
	Standard range	Extended range	Ød1 H9	L1 0/+0.20	S	Ød1 - A
340.0*	3.0 - 9.9	3.0 - 40.0	d1 + 2.90	2.40	1.45	0.4
340.1	10.0 - 19.9	6.0 - 200.0	d1 + 4.50	3.60	2.25	0.6
340.2	20.0 - 39.9	10.0 - 400.0	d1 + 6.20	4.80	3.10	0.7
340.3	40.0 - 119.9	20.0 - 700.0	d1 + 9.40	7.10	4.70	0.8
340.4	120.0 - 629.9	35.0 - 999.9	d1 + 12.20	9.50	6.10	0.9
340.5	630.0 - 999.9	80.0 - 999.9	d1 + 19.00	15.00	9.50	0.9

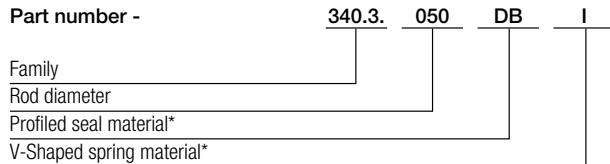

For special applications > 40 MPa, we recommend using an H8/f8 tolerance (groove/rod) or selecting other, more suitable materials. Please contact our experts.

*Only BECA 340.0 profiles are fitted with an O'Ring instead of a V-spring.

○ EXAMPLE OF CODIFICATION

STANDARD CODIFICATION

Materials _____ : 60% Bronze-filled PTFE profiled seal- Code DB
 _____ : Stainless steel V-Shaped spring - Code I
Rod diameter _____ : Ød1 = 50.00 mm
Groove diameter _____ : ØD1 = 59.40 mm
Part number _____ : 340.3050DBI

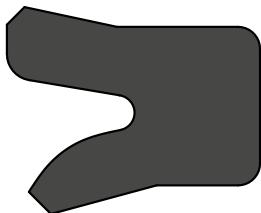

* The codes that define the materials are set out in the materials table on the previous page.

The figures highlighted in bold correspond to the rod diameters that are recommended by standard ISO 3320. Other intermediate sizes can be provided.

ROD SEALS BECA 385

DESCRIPTION

The BECA 385 profile is a U-ring type single acting rod seal with asymmetrical rubber lips for low-pressure applications.

ADVANTAGES

Very good sealing at low pressures
Excellent wear resistance
Reduced size

APPLICATIONS

Material handling - Lifting
Presses
Hydraulic cylinders

MATERIALS

NBR 80 Shore A
FKM 80 Shore A

Other grades of materials are available.
Please contact our experts.

TECHNICAL DATA

Temperature	-30°C / +200°C
Pressure	8 MPa
Speed	0.5 m/sec
Media	Mineral hydraulic oils Fire-resistant liquids Biocompatible fluids Water Others (contact our experts)

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

The figures highlighted in bold correspond to the rod diameters that are recommended by standard ISO 3320. Other intermediate sizes can be provided.

ROD SEALS BECA 640

DESCRIPTION

The BECA 640 profile is a double acting composite rod seal composed of a rubber O'Ring or square ring and a polyamide friction ring.

ADVANTAGES

The square ring does not twist
Low friction coefficient
Excellent extrusion resistance
Compatible with hydraulic oils

APPLICATIONS

Agriculture
Mobile machinery
Hydraulic cylinders

MATERIALS

Friction ring

Polyamide PA6

O'Ring or square ring

NBR 70 Shore A

Other grades of materials are available.
Please contact our experts.

TECHNICAL DATA

Temperature	-30°C / +100°C
Pressure	40 MPa
Speed	0.5 m/sec
Media	Mineral hydraulic oils Fire-resistant liquids Biocompatible fluids Water Others (contact our experts)

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

EXTRUSION GAPS

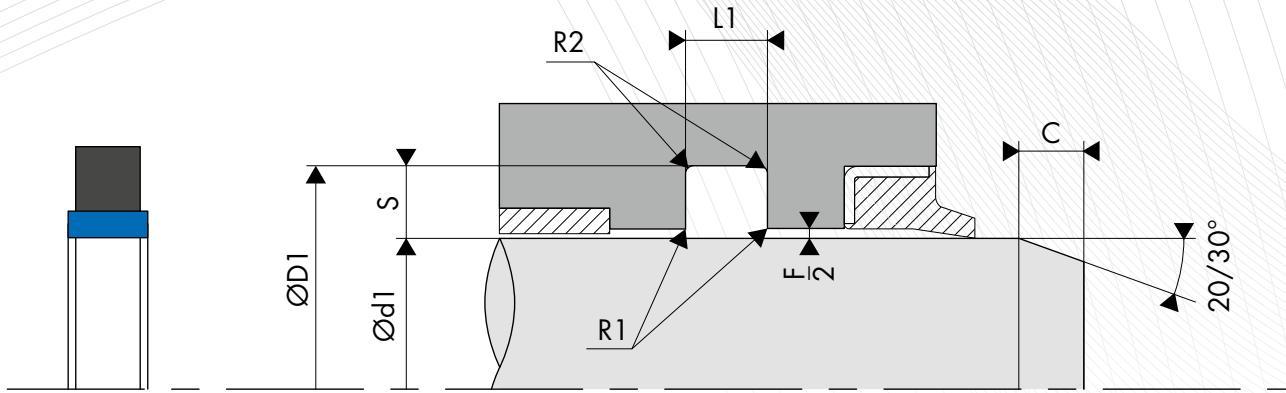

Pressure MPa	Radial gap F/2
20 MPa	0.25
35 MPa	0.20
40 MPa	0.15

SURFACE ROUGHNESS

Roughness	Dynamic surface area	Static surface area	Groove flanks
Ra	0.05 - 0.2 µm	≤1.6 µm	≤3.2 µm
Rz	0.4 - 1.6 µm	≤6.3 µm	≤10.0 µm
Rmax	0.63 - 2.5 µm	≤10.0 µm	≤16.0 µm

CHAMFERS AND RADIUS

Radial section S	Radius R1	Radius R2	Chamfer C
1.30	0.30	0.10	2.00
2.00	0.30	0.20	2.00
2.60	0.30	0.20	2.00
3.25	0.30	0.20	3.00
3.90	0.30	0.20	3.00
4.55	0.30	0.20	4.00
5.20	0.30	0.30	4.50
5.85	0.30	0.30	5.00
6.50	0.30	0.40	5.50
7.80	0.30	0.40	6.00
10.40	0.30	0.60	8.00
13.00	0.30	0.80	10.00

○ INSTALLATION DIMENSIONS

Rod diameter	Groove diameter	Groove width	Radial section	Cross-section
Ød1 f8	ØD1 H9	L1 0/+0.20	S	Ød2
3.0 - 11.9	d1 + 2.60	1.35	1.30	1.00
12.0 - 23.9	d1 + 4.00	2.00	2.00	1.78
24.0 - 33.9	d1 + 5.20	2.60	2.60	2.00
34.0 - 45.9	d1 + 6.50	3.20	3.25	2.62
46.0 - 58.9	d1 + 7.80	3.85	3.90	3.00
59.0 - 80.9	d1 + 9.10	4.50	4.55	3.53
81.0 - 129.9	d1 + 10.20	5.10	5.20	4.00
130.0 - 199.9	d1 + 11.70	5.70	5.85	5.00
200.0 - 299.9	d1 + 13.00	6.35	6.50	5.33
300.0 - 399.9	d1 + 15.60	7.60	7.80	6.99
400.0 - 599.9	d1 + 20.80	10.10	10.40	8.40
600.0 - **	d1 + 26.00	12.60	13.00	12.00

For special applications > 40 MPa, we recommend using an H8/f8 tolerance (groove/rod) or selecting other, more suitable materials. Please contact our experts.

○ EXAMPLE OF CODIFICATION

STANDARD CODIFICATION

Materials _____ : Polyamide friction ring - D6
 : NBR 70 Shore A O'Ring / square ring - Code K6

The figures highlighted in bold correspond to the rod diameters that are recommended by standard ISO 3320. Other intermediate sizes can be provided.

Other profiles

ROD SEALS BECA 230/AE

DESCRIPTIONS

The BECA 230/AE profile is a rubber U-ring type single acting rod seal with offset lips, with a filled PTFE or POM back-up ring.

ADVANTAGES

- Optimised sealing effect
- Excellent resistance to high temperatures depending on the type of material chosen
- Good extrusion resistance
- Assembly by deformation in closed groove

APPLICATIONS

- Mobile hydraulics
- Machine tools
- Presses
- Standard cylinders

MATERIALS

Profiled seal

NBR 70 Shore A

NBR 85 Shore A

FKM 85 Shore A

Back-up ring

Polyoxymethylene - POM

Bronze-filled PTFE

Other grades of materials are available.
Please contact our experts.

TECHNICAL DATA

Temperature	-30°C / +200°C
Pressure	25 MPa
Speed	0.5 m/sec
Media	Mineral hydraulic oils Fire-resistant liquids Biocompatible fluids Water Others (contact our experts)

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

EXTRUSION GAPS

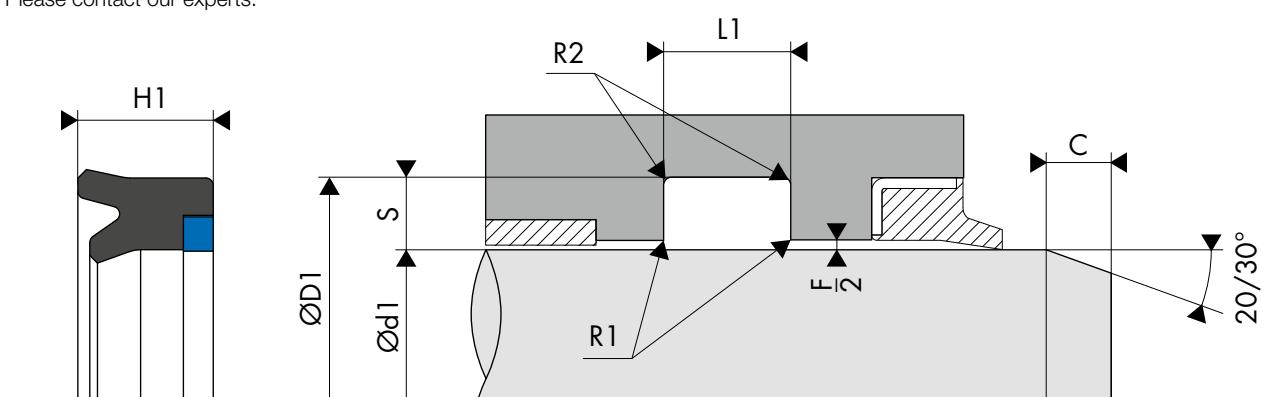

Pressure MPa	Radial gap F/2
2.5 MPa	0.45
5.0 MPa	0.35
7.5 MPa	0.30
10.0 MPa	0.25
15.0 MPa	0.20
25.0 MPa	0.10

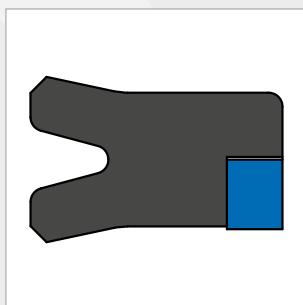

SURFACE ROUGHNESS

Roughness	Dynamic surface area	Static surface area	Groove flanks
R _a	0.1 - 0.4 µm	≤1.6 µm	≤3.2 µm
R _z	0.63 - 2.5 µm	≤6.3 µm	≤10.0 µm
R _{max}	1.0 - 4.0 µm	≤10.0 µm	≤16.0 µm

CHAMFERS AND RADIUS

Radial section S	Radius R1	Radius R2	Chamfer C
3.50	0.20	0.40	2.00
5.00	0.40	0.60	2.50
7.50	0.80	1.00	4.00
10.00	0.80	1.00	5.00

ROD SEALS BECA 235T/AE

DESCRIPTIONS

The BECA 235T/AE profile is a rubber U-ring type single acting rod seal with matching lips and a POM back-up ring.

ADVANTAGES

Optimised sealing effect
Excellent resistance to high temperatures depending on the type of material chosen
Good extrusion resistance

APPLICATIONS

Mobile hydraulics
Machine tools
Presses
Standard cylinders

MATERIALS

Profiled seal
NBR 70 Shore A
NBR 85 Shore A
FKM 85 Shore A
Back-up ring
Polyoxymethylene - POM

ROD SEALS BECA 310/B

DESCRIPTIONS

The BECA 310/B profile is a U-ring type single acting compact rod seal with matching lips, symmetrical lips and a second sealing lip, and is composed of a very dense polyurethane body. It can be assembled in a groove according to standard ISO 5597.

ADVANTAGES

Good sealing at both high and low pressures
Excellent abrasion resistance

APPLICATIONS

Mobile hydraulics
Material handling - Lifting
Presses
Hydraulic cylinders

MATERIALS

PU 93 Shore A - Blue
PU 96 Shore A - Blue
High temp. PU 96 Shore A - Beige

Other grades of materials are available.
Please contact our experts.

TECHNICAL DATA

Temperature	-30°C / +110°C
Pressure	40 MPa
Speed	0.5 m/sec
Media	Mineral hydraulic oils

The figures above indicate the maximum values and may not be cumulated. They may be developed, depending on the materials used.

EXTRUSION GAPS

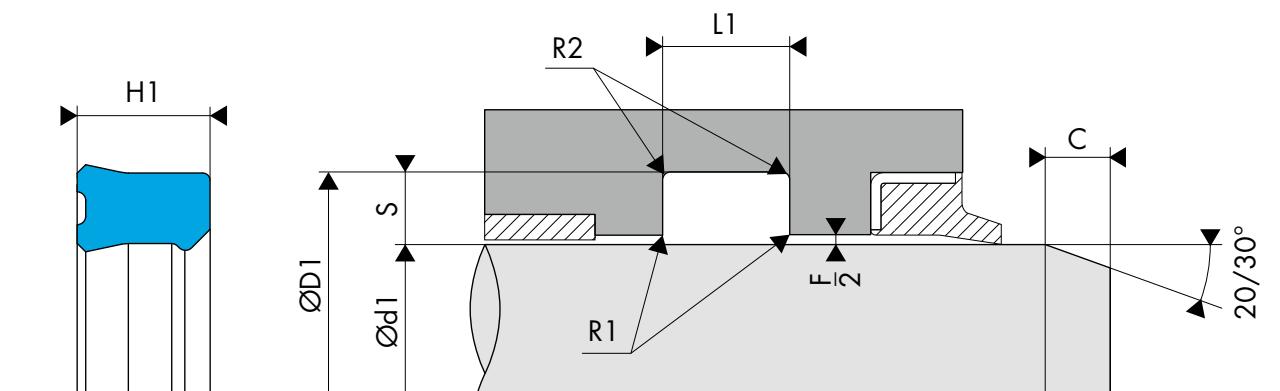

Rod diameter $\varnothing d_1$	Radial gap $F/2$				
	$\leq 5 \text{ MPa}$	$\leq 10 \text{ MPa}$	$\leq 20 \text{ MPa}$	$\leq 30 \text{ MPa}$	$\leq 40 \text{ MPa}$
$\leq 60 \text{ mm}$	0.40	0.30	0.20	0.15	0.10
$> 60 \text{ mm}$	0.50	0.40	0.30	0.20	0.15

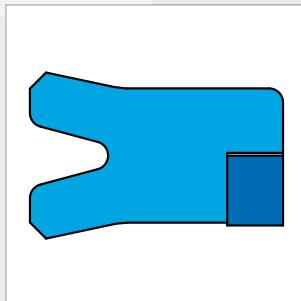

SURFACE ROUGHNESS

Roughness	Dynamic surface area	Static surface area	Groove flanks
Ra	0.1 - 0.4 μm	$\leq 1.6 \mu\text{m}$	$\leq 3.2 \mu\text{m}$
Rz	0.63 - 2.5 μm	$\leq 6.3 \mu\text{m}$	$\leq 10.0 \mu\text{m}$
Rmax	1.0 - 4.0 μm	$\leq 10.0 \mu\text{m}$	$\leq 16.0 \mu\text{m}$

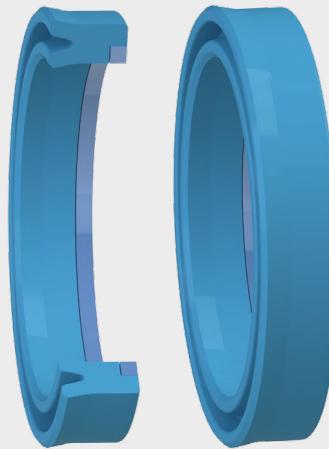

CHAMFERS AND RADIUS

7.50	0.80	1.00	4.00

ROD SEALS BECA 335T/AE

DESCRIPTIONS

The BECA 335T/AE profile is a polyurethane U-ring type single acting rod seal with matching lips and a POM back-up ring.

ADVANTAGES

- Optimised sealing effect
- Excellent abrasion resistance
- Very good extrusion resistance
- Very good wear resistance

APPLICATIONS

- Agriculture
- Mobile machinery
- Lifting systems
- Injection presses
- Hydraulic cylinders

MATERIALS

Profiled seal
PU 93 Shore A - Blue

PU 96 Shore A - Blue
High temp. PU 96 Shore A - Beige

Back-up ring

Polyoxymethylene - POM
